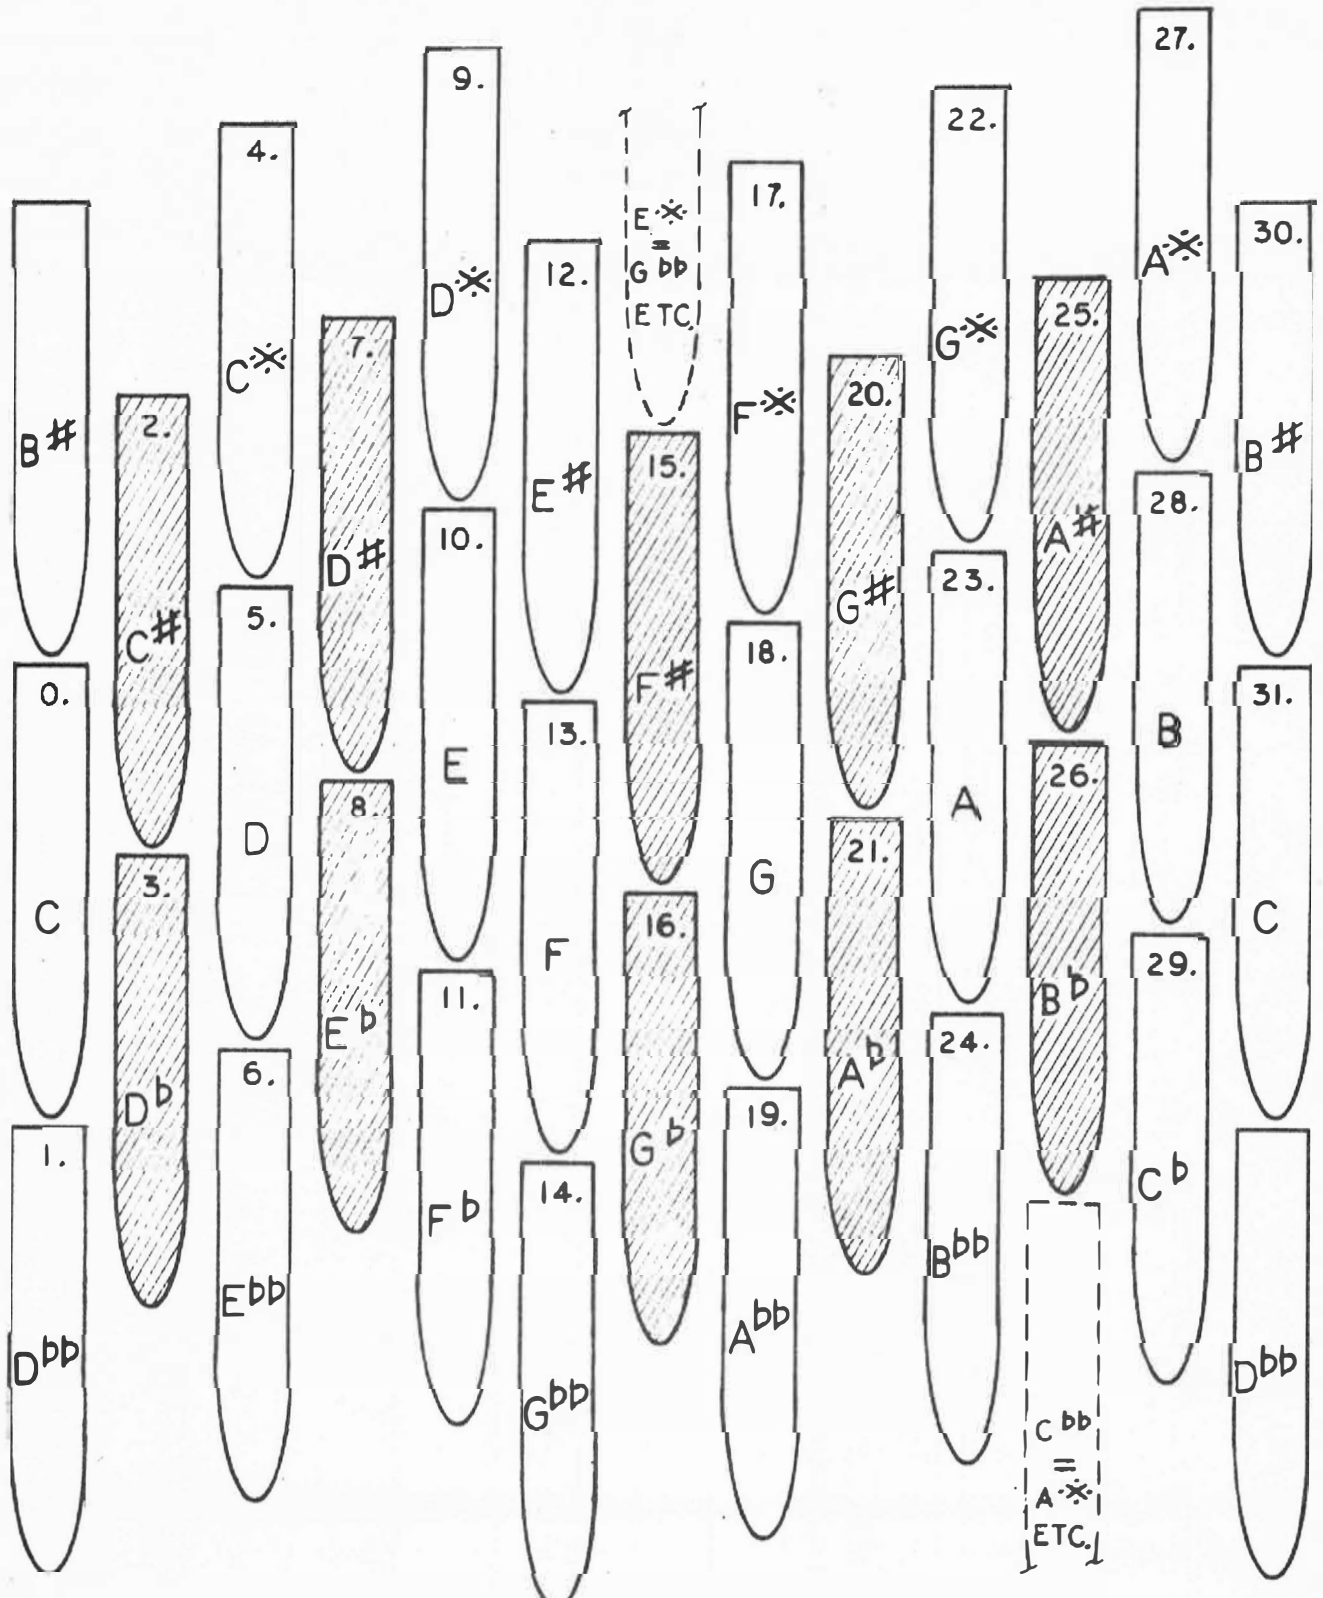
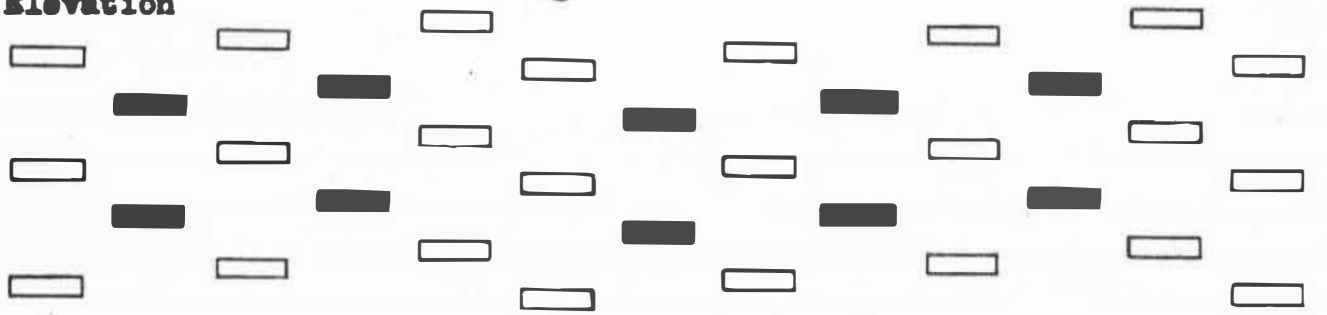
THE 31-TONE SCALE APPLIED TO BOSANQUET'S GENERALIZED KEYBOARD

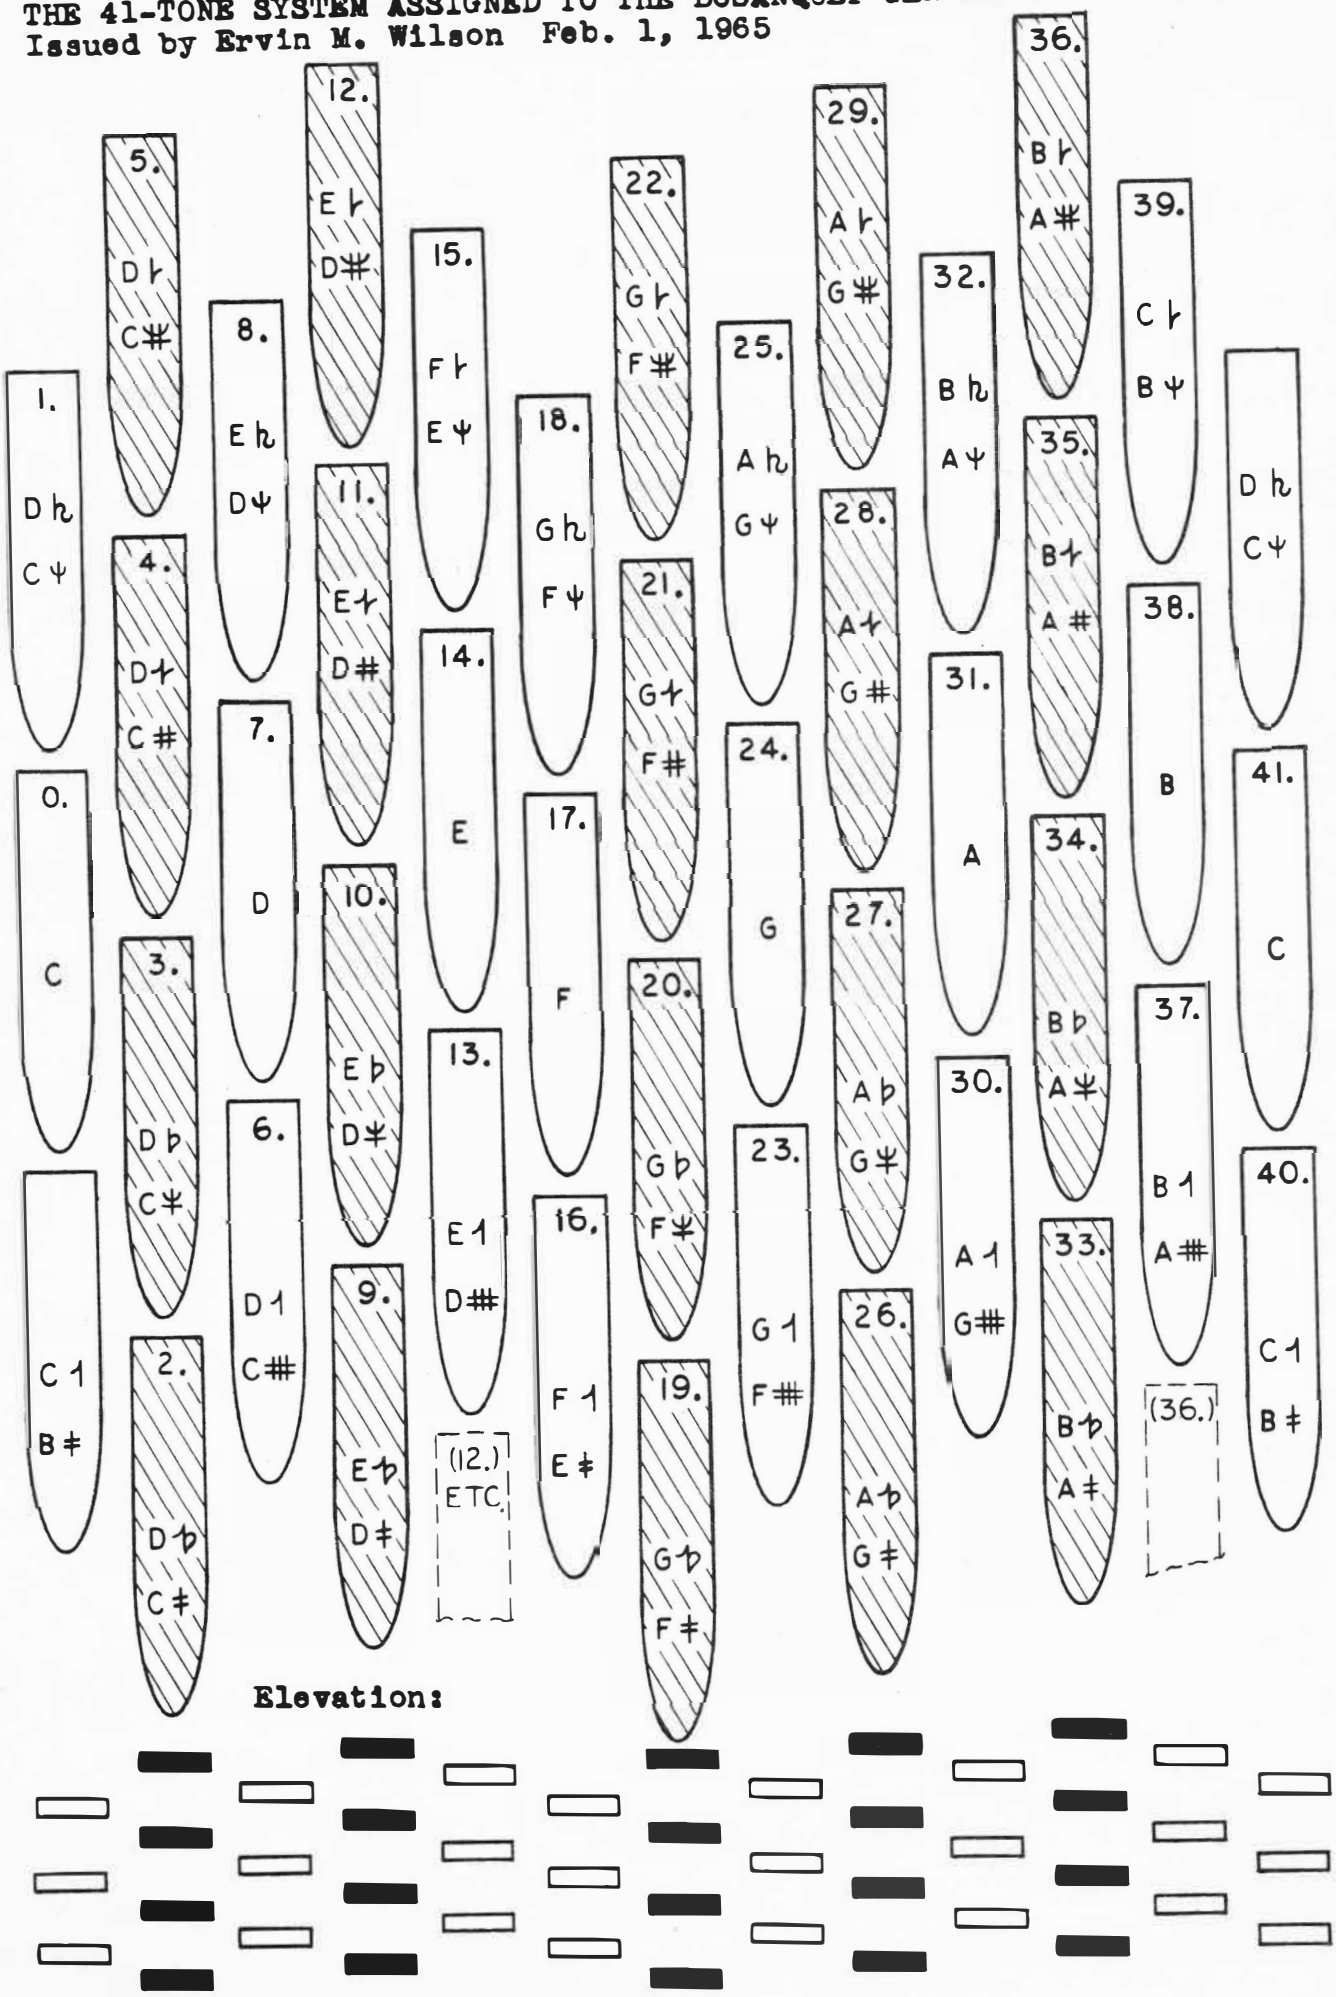


Elevation



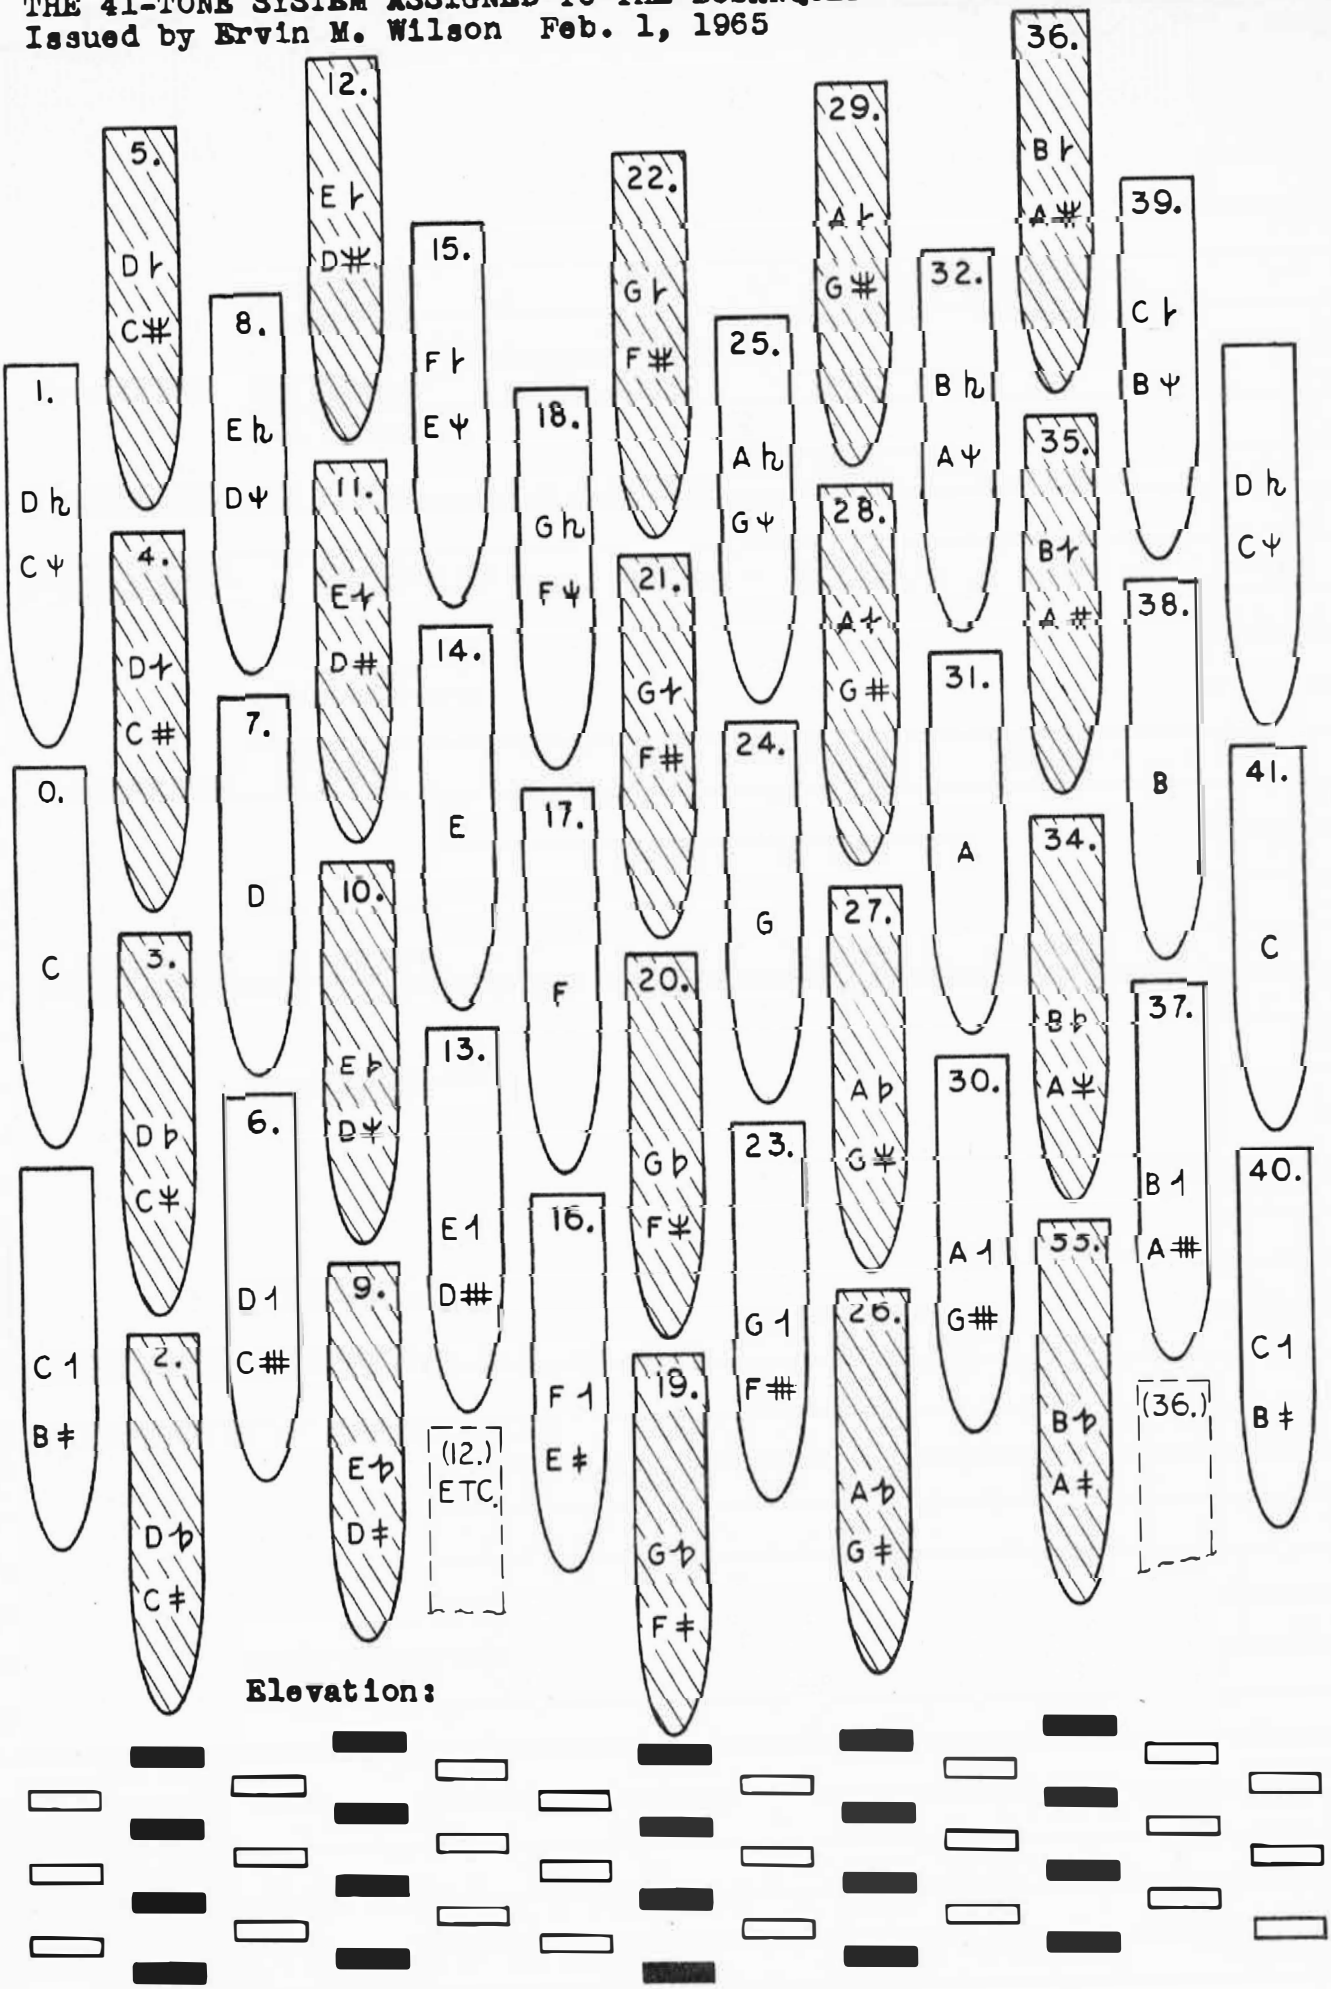
E. Wilson 1961

THE 41-TONE SYSTEM ASSIGNED TO THE BOSANQUET GENERALIZED KEYBOARD
Issued by Ervin M. Wilson Feb. 1, 1965



Elevation:

THE 41-TONE SYSTEM ASSIGNED TO THE BOSANQUET GENERALIZED KEYBOARD
Issued by Ervin M. Wilson Feb. 1, 1965



Ervin M. Wilson
651 Huntley Drive
Los Angeles, Calif. 90069

Gentlemen;

Enclosed is a diagram of the Bosanquet Generalized Keyboard (first published in Mr. R. H. M. Bosanquet's Elementary Treatise on Musical Intervals and Temperaments, 1876, and further described by Hermann Helmholtz in Sensations of Tone). This historical keyboard, now preserved in the South Kensington Museum, has the remarkable and immensely desireable property of being able to contain any musical system concieved as a series or cycle of Fourths. In addition to the Pythagorean tuning and meantone temperament this would include the negative series of equal systems having 19, 31, 43, 55 tones; the positive series of equal systems having 17, 29, 41, 53 tones; and the doubly-positive equal systems of 22 and 46 tones per Octave. Two of these systems have recieved considerable attention in recent years; the 31-tone system and the 41-tone system. Prof. A. D. Fokker of Holland is the primary exponent of the 31-tone system (ref. Equal Temperament and the 31-keyed Organ by A. D. Fokker in the Scientific Monthly, October 1955). However, an interest in the 31-tone system has also arisen independently in various parts of the United States. The 41-tone equal system is parallel, melodically and harmonically to the 43-tone unequal scale used by Harry Partch (ref. Genesis of a Music by Harry Partch). Mr. Partch's thoughtful approach to new scale resources has not been without a significant influence. (In this regard ref. On the Development of Musical Systems by David Kraehenbuehl and Christopher Schmidt in the 'Journal of Music Theory', 1962, a Yale School of Music publication.)

A most urgent need is being felt by a creative minority for keyboard instruments embodying these two microtonal schemes. It is with this same urgency that I, as a creative musician, submit these keyboard diagrams and pitches for the 31-tone and 41-tone systems to you for re-consideration in the light of a contemporary trend and resultant need. Please let it be understood that these are submitted with no expectation of financial reward. It would be reward enough to have such instruments commercially available.

May I cordially invite a fair and realistic consideration of these instruments.

Most sincerely yours,

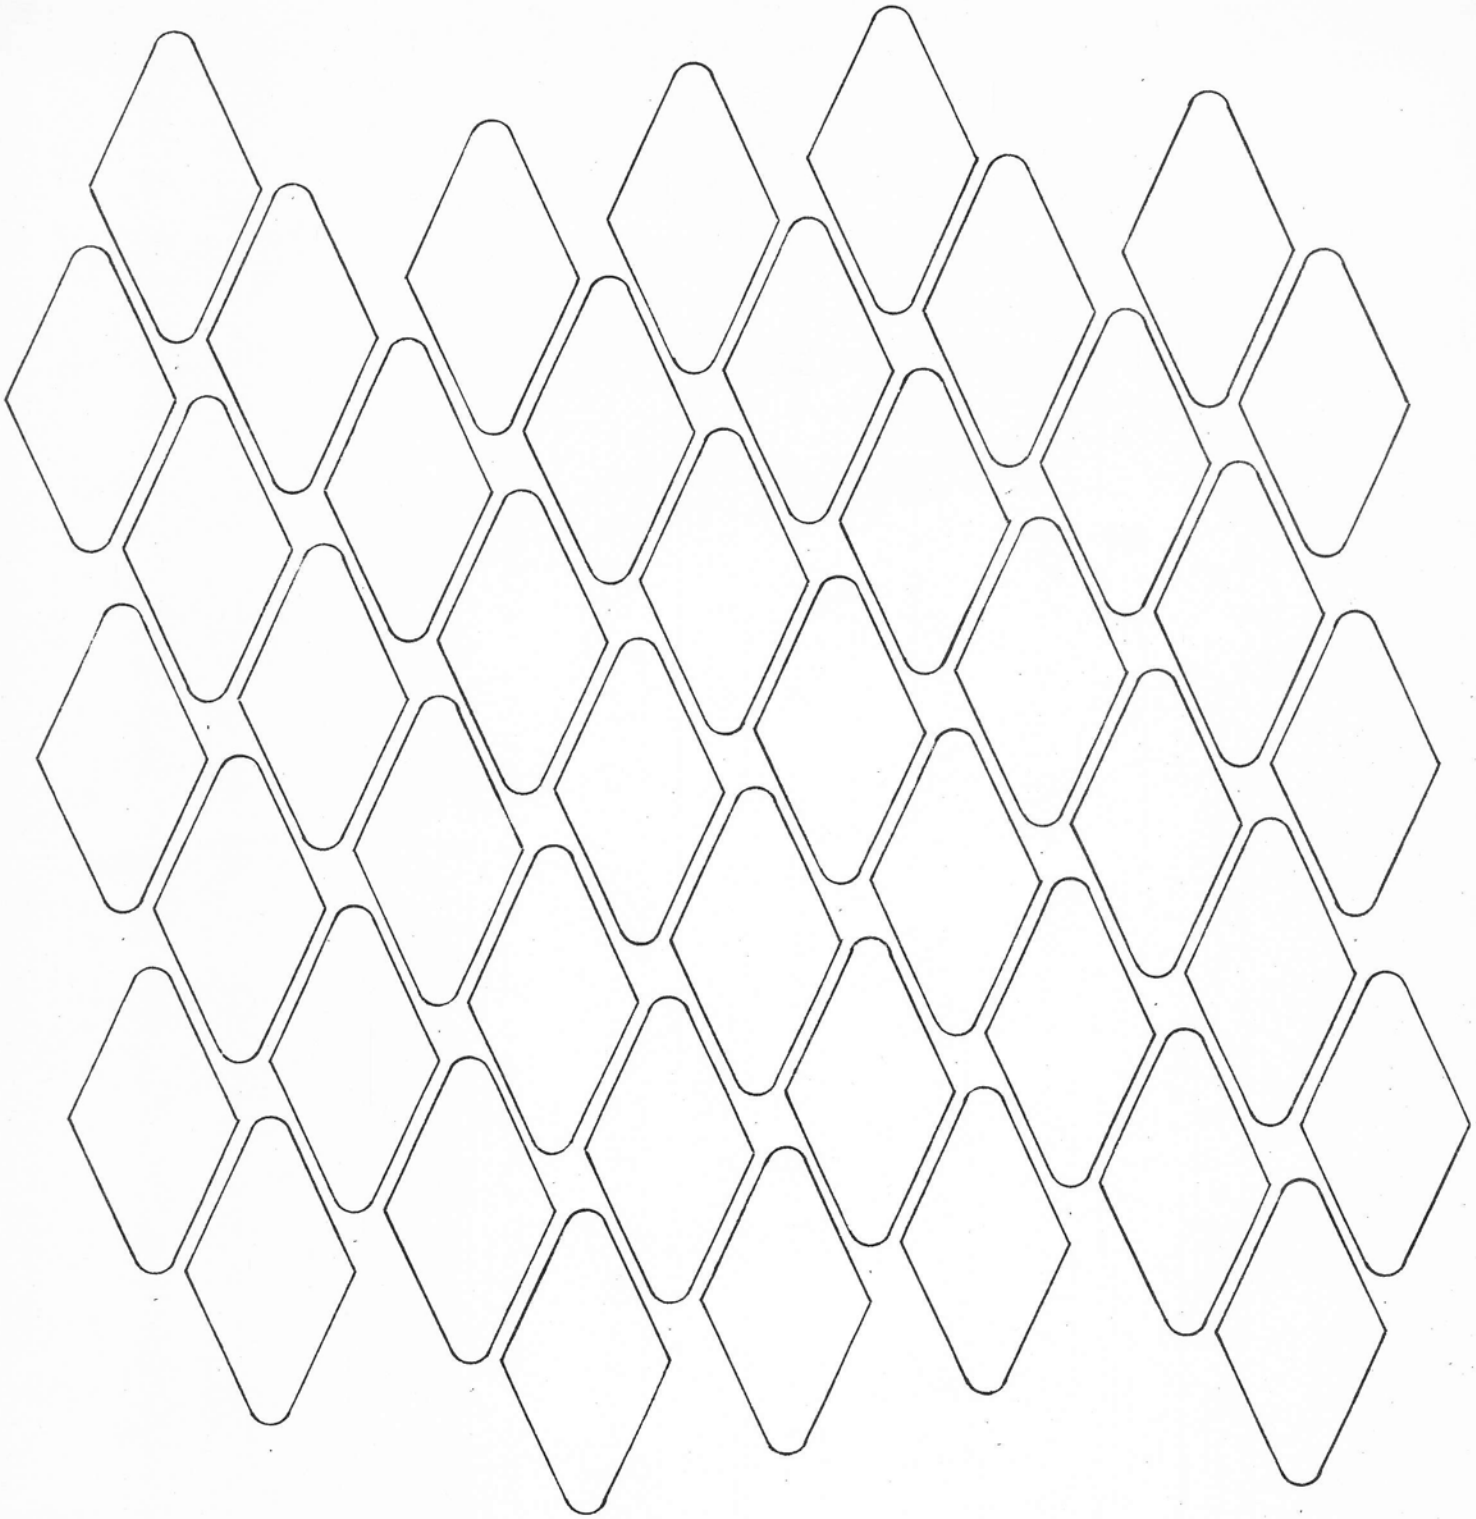
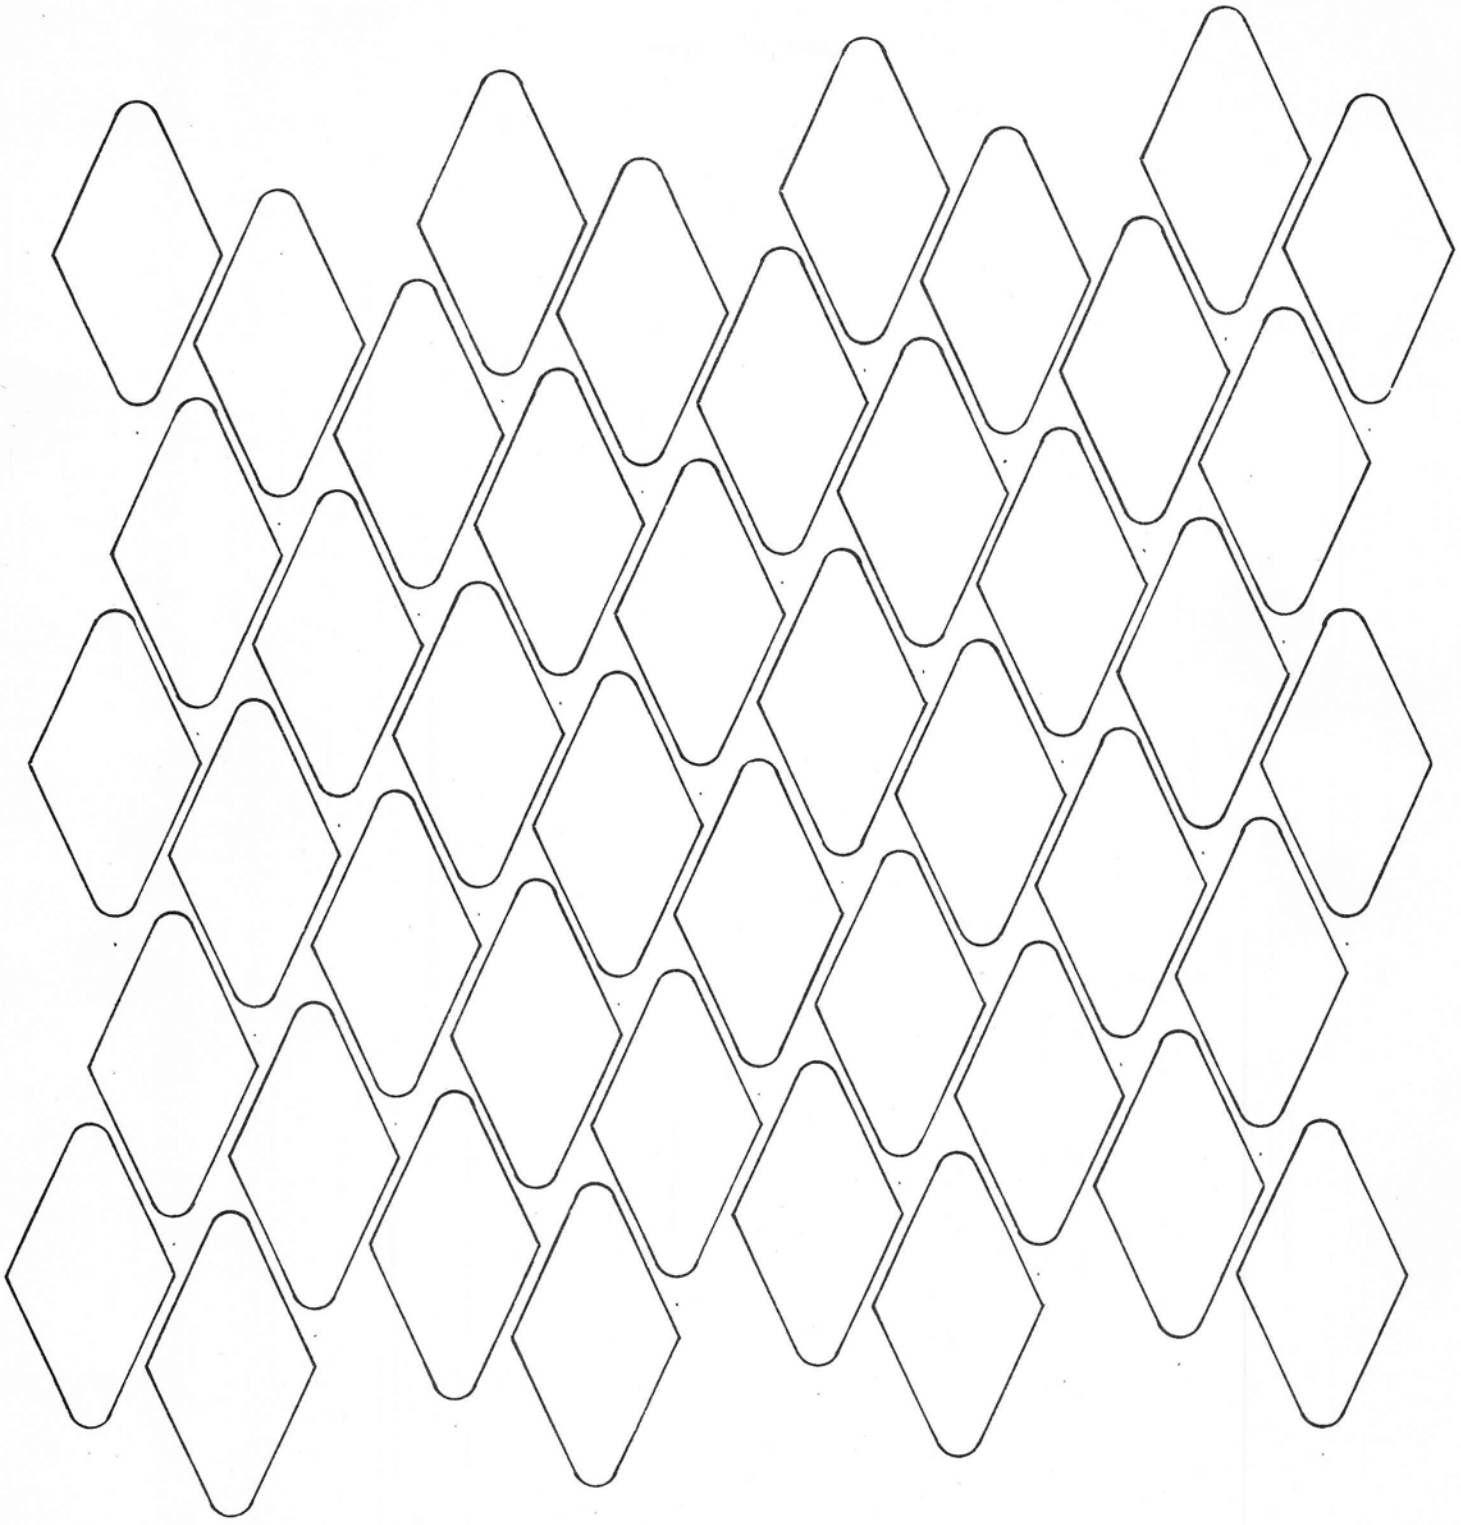
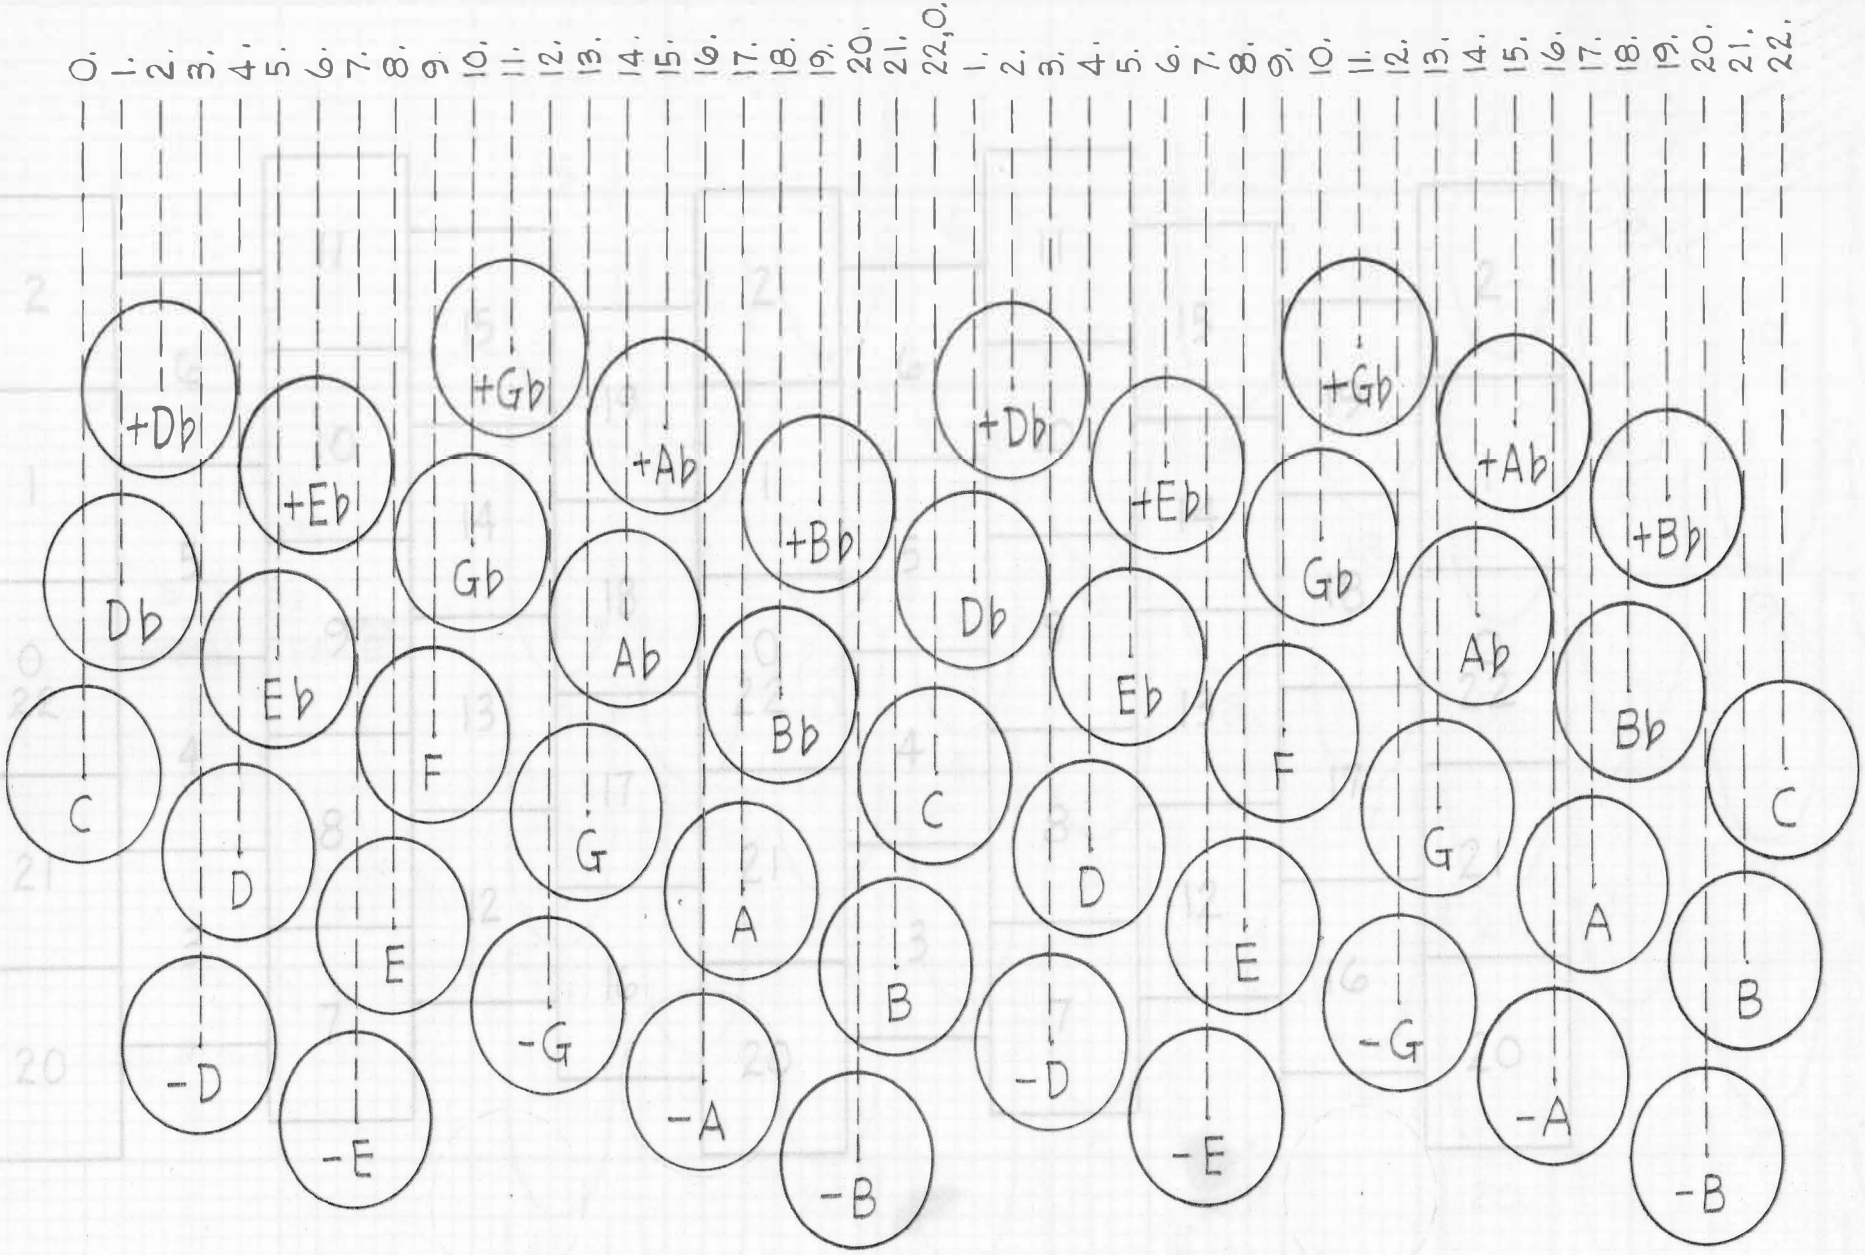
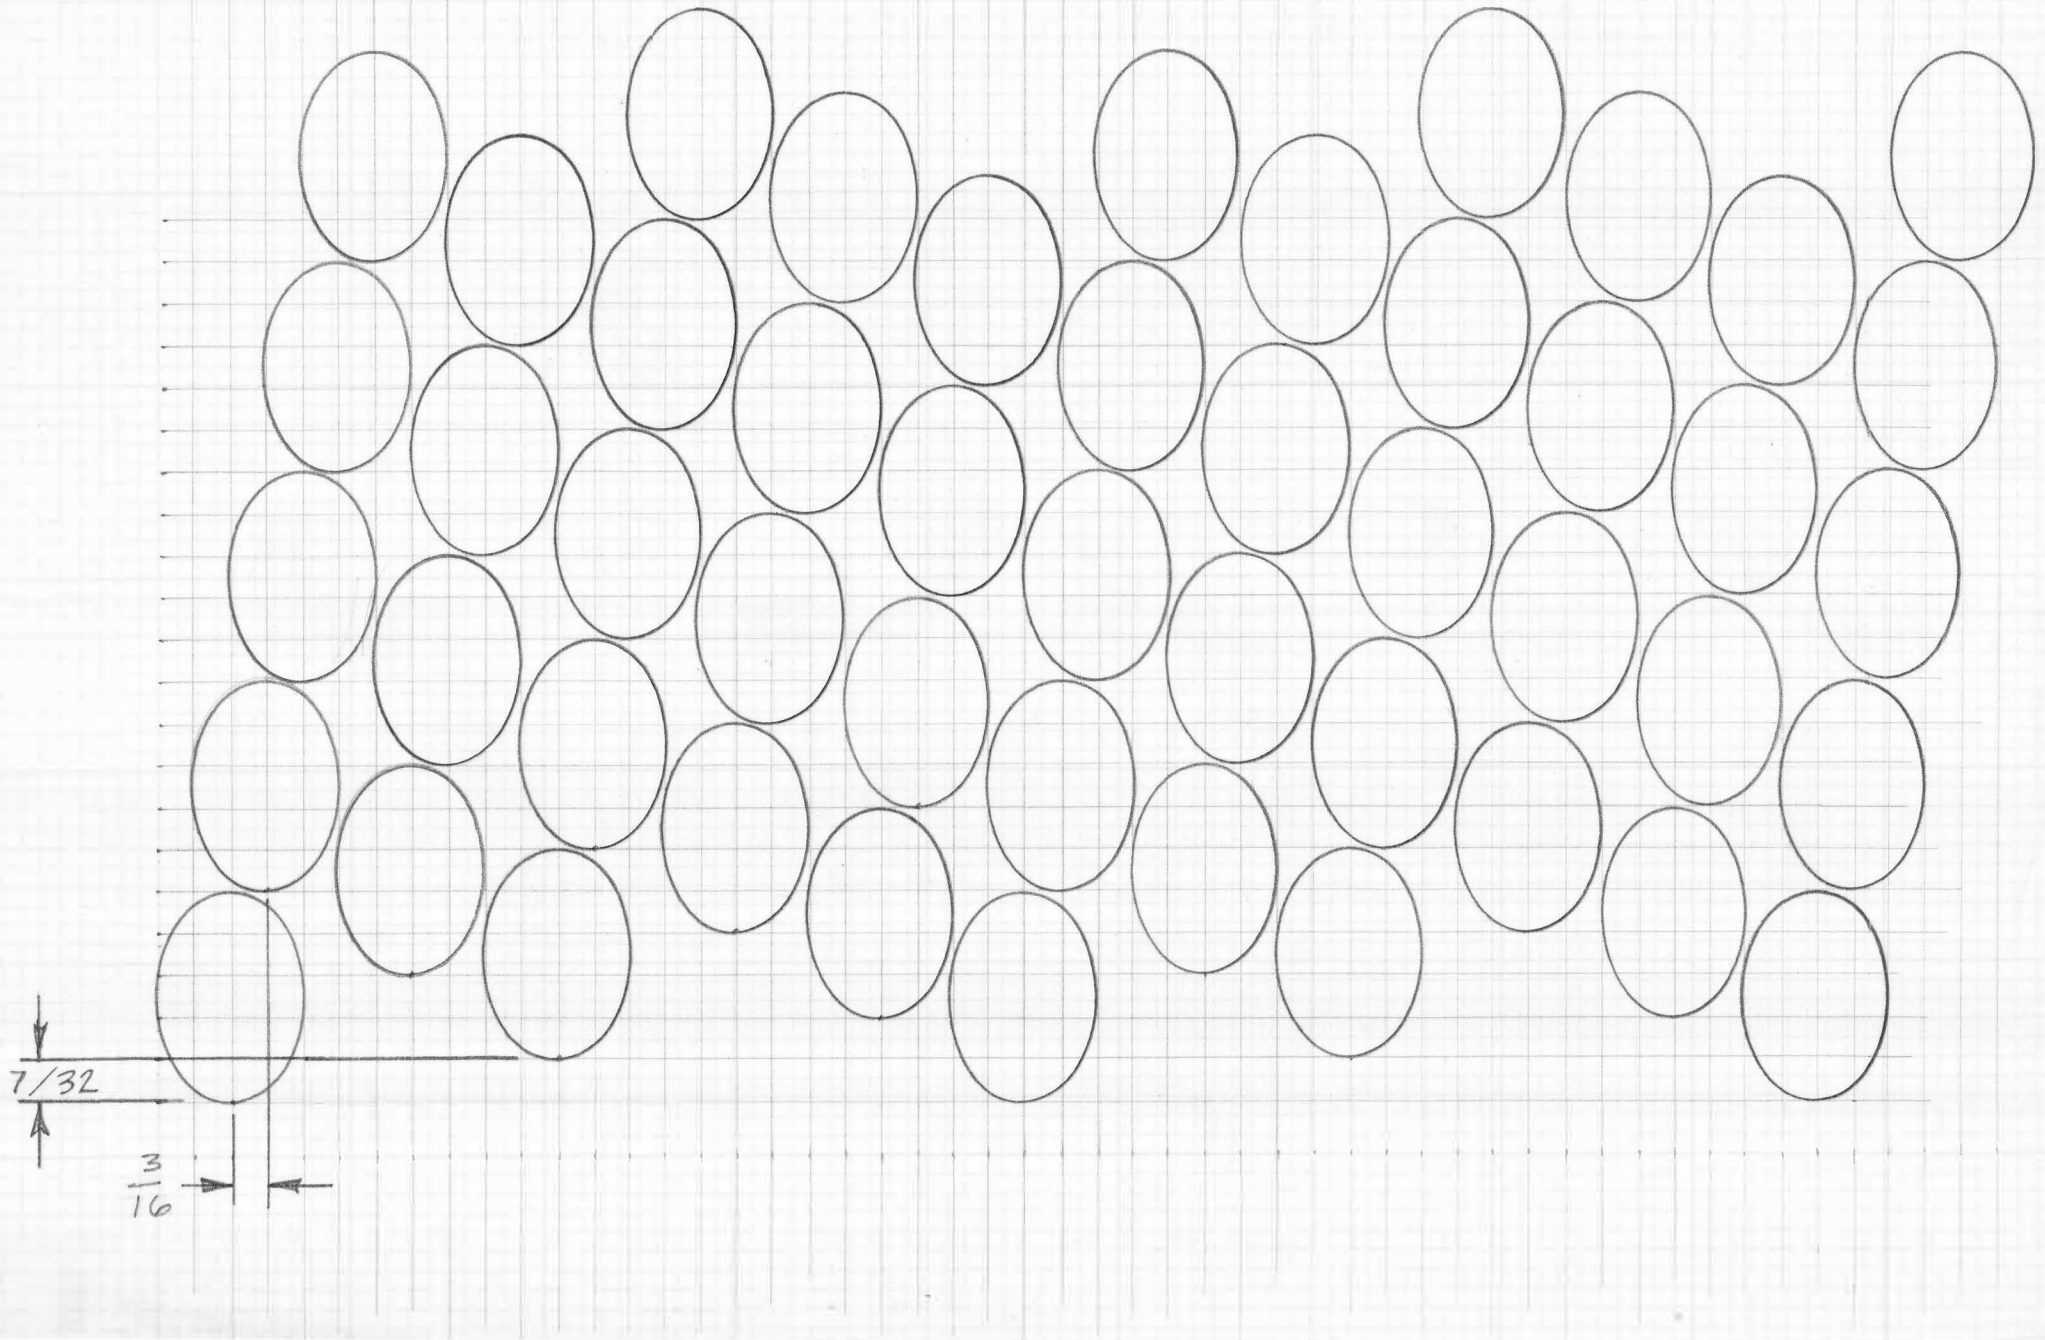
THE ASSIGNMENT OF WILSON'S 41-TONE MATRIX TO THE BOSANQUET PATTERN
DIGITAL DESIGN BY ERV WILSON



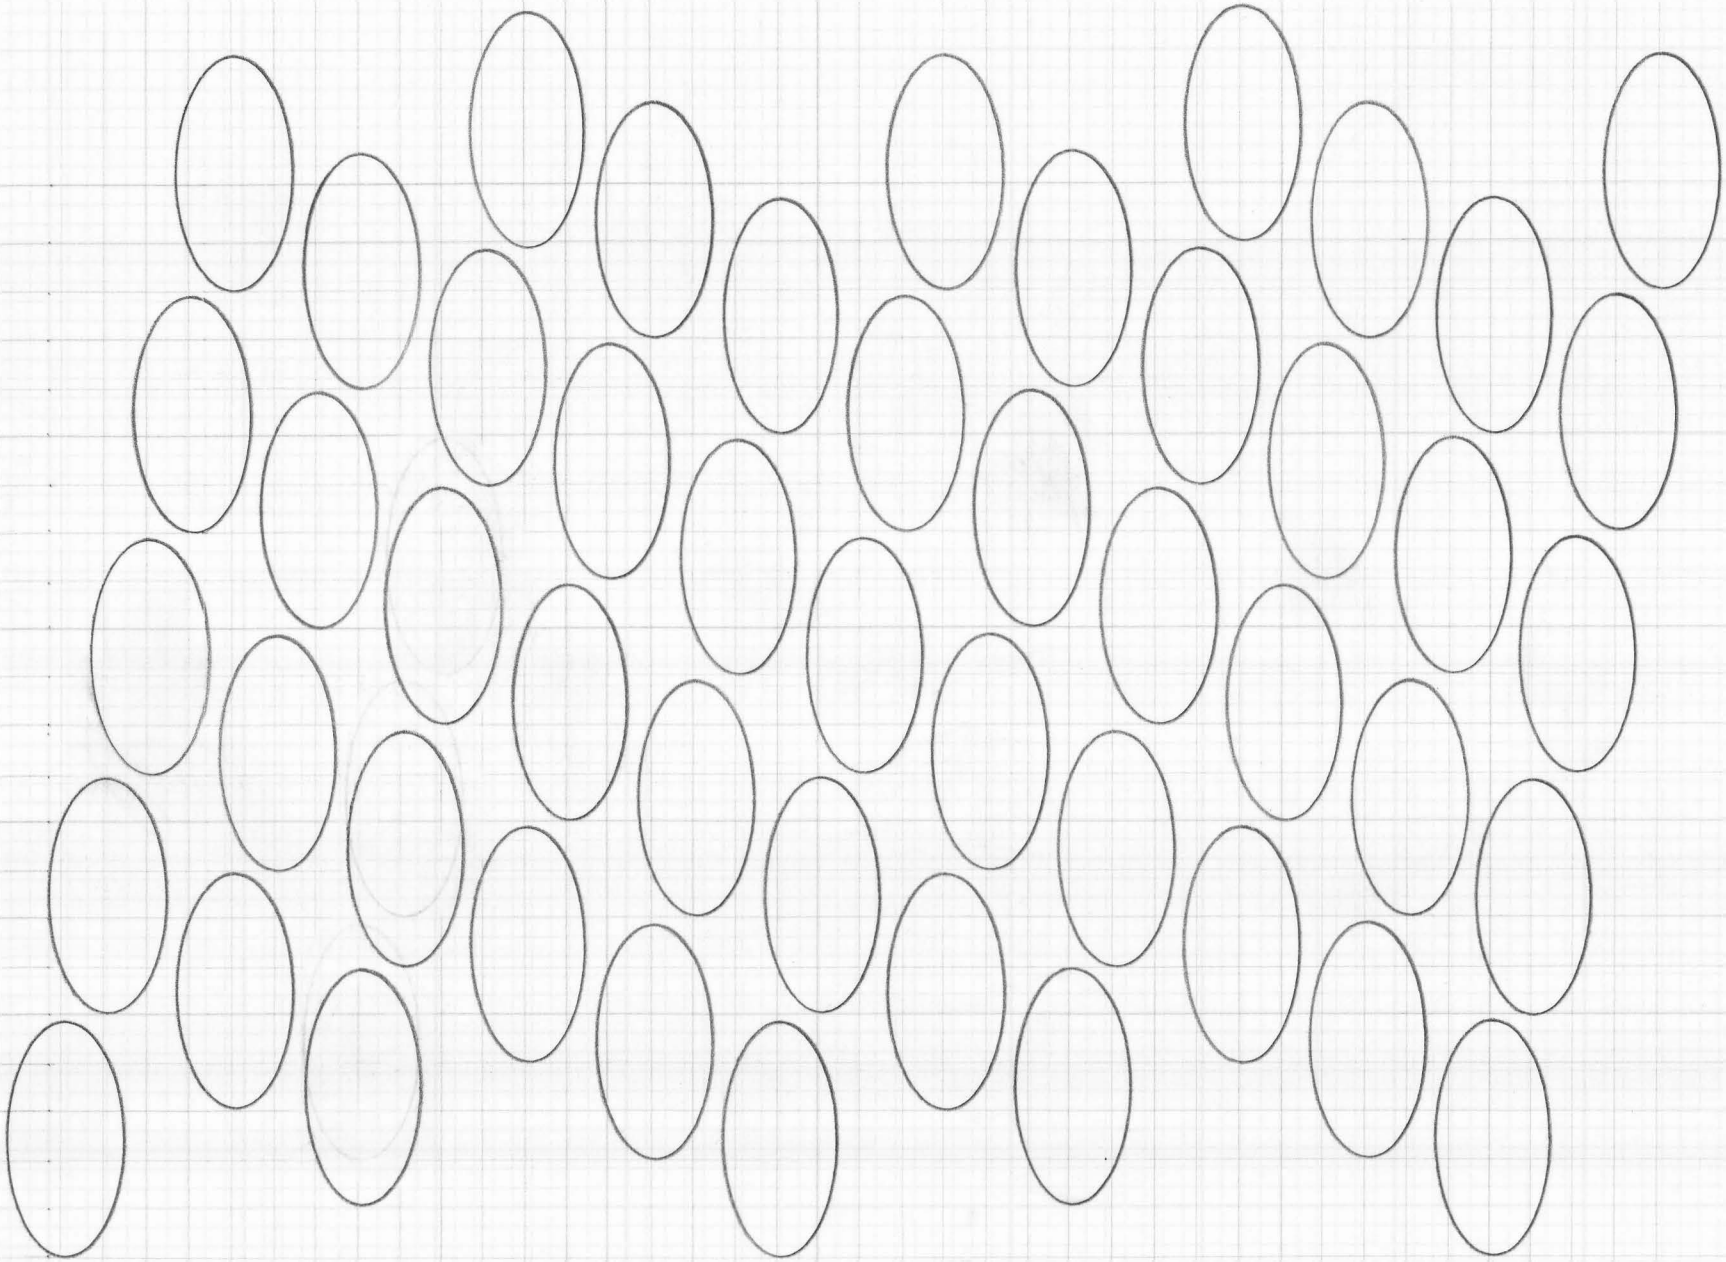


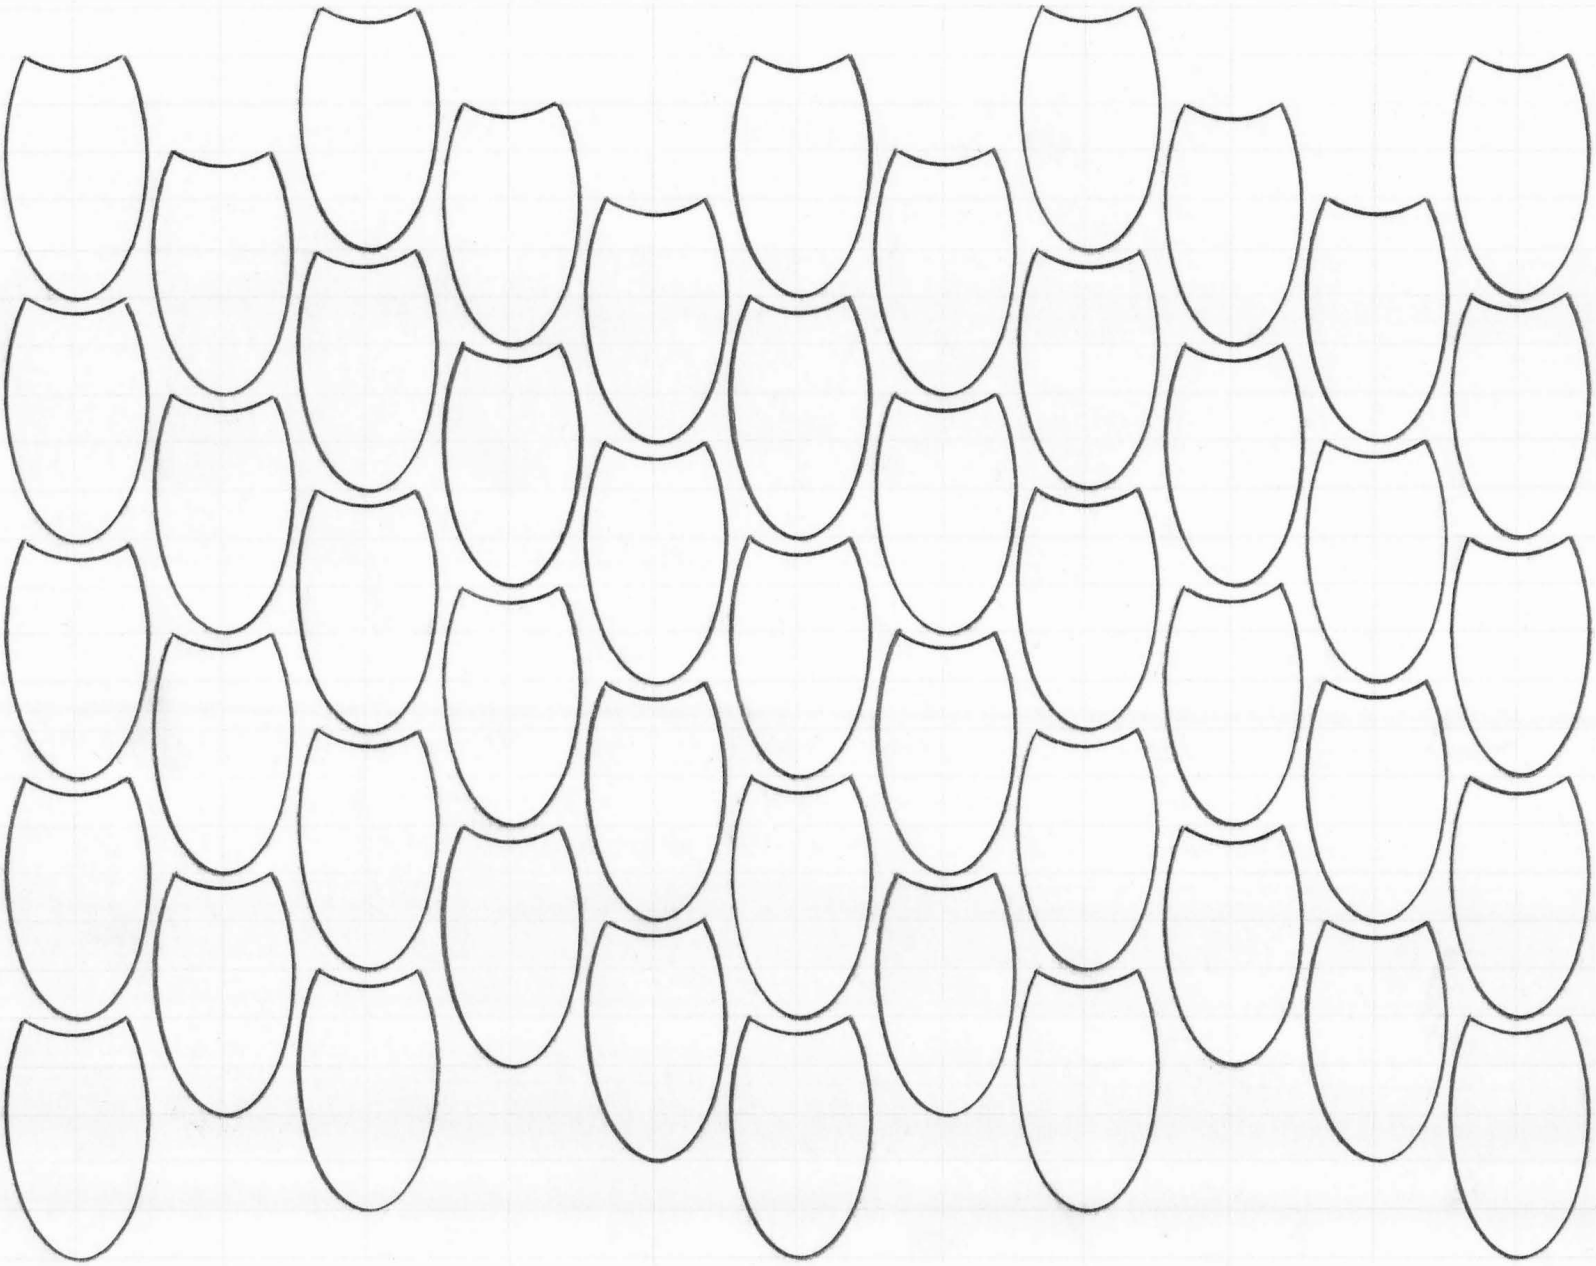


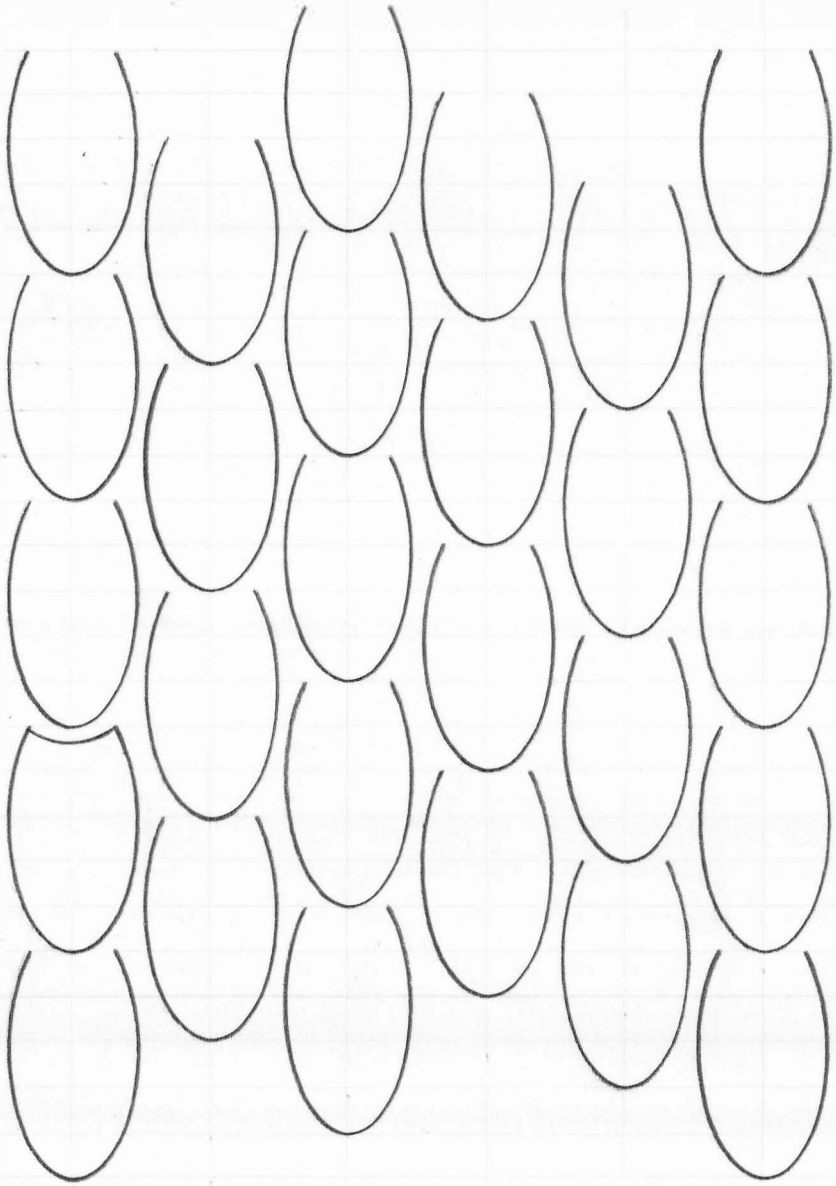
22-tone Keyboard (D)
Issued by Ervin M. Wilson, 1969
U.S. Patent No. 3342094

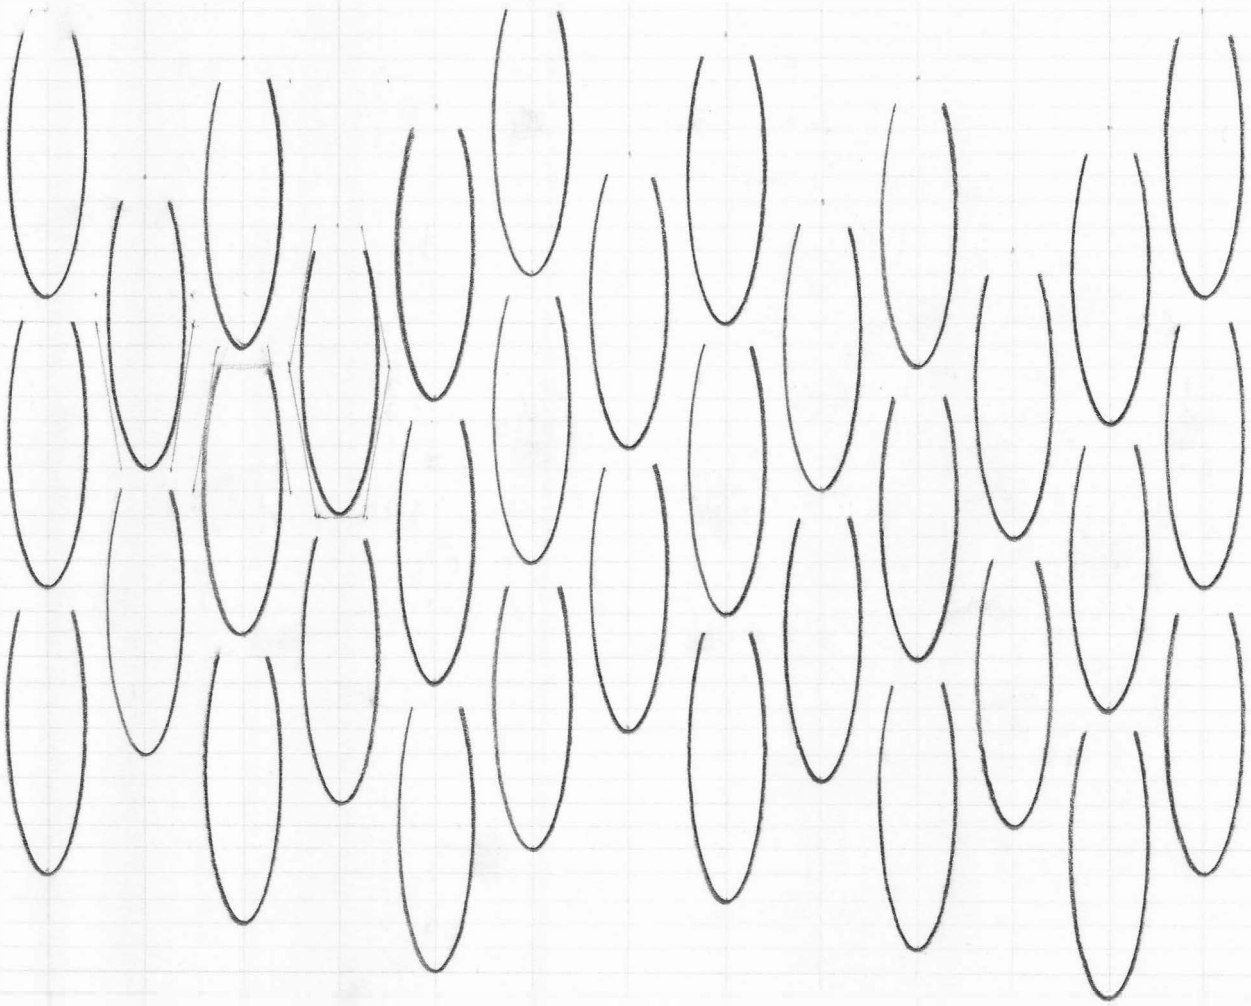


7/32
3/16



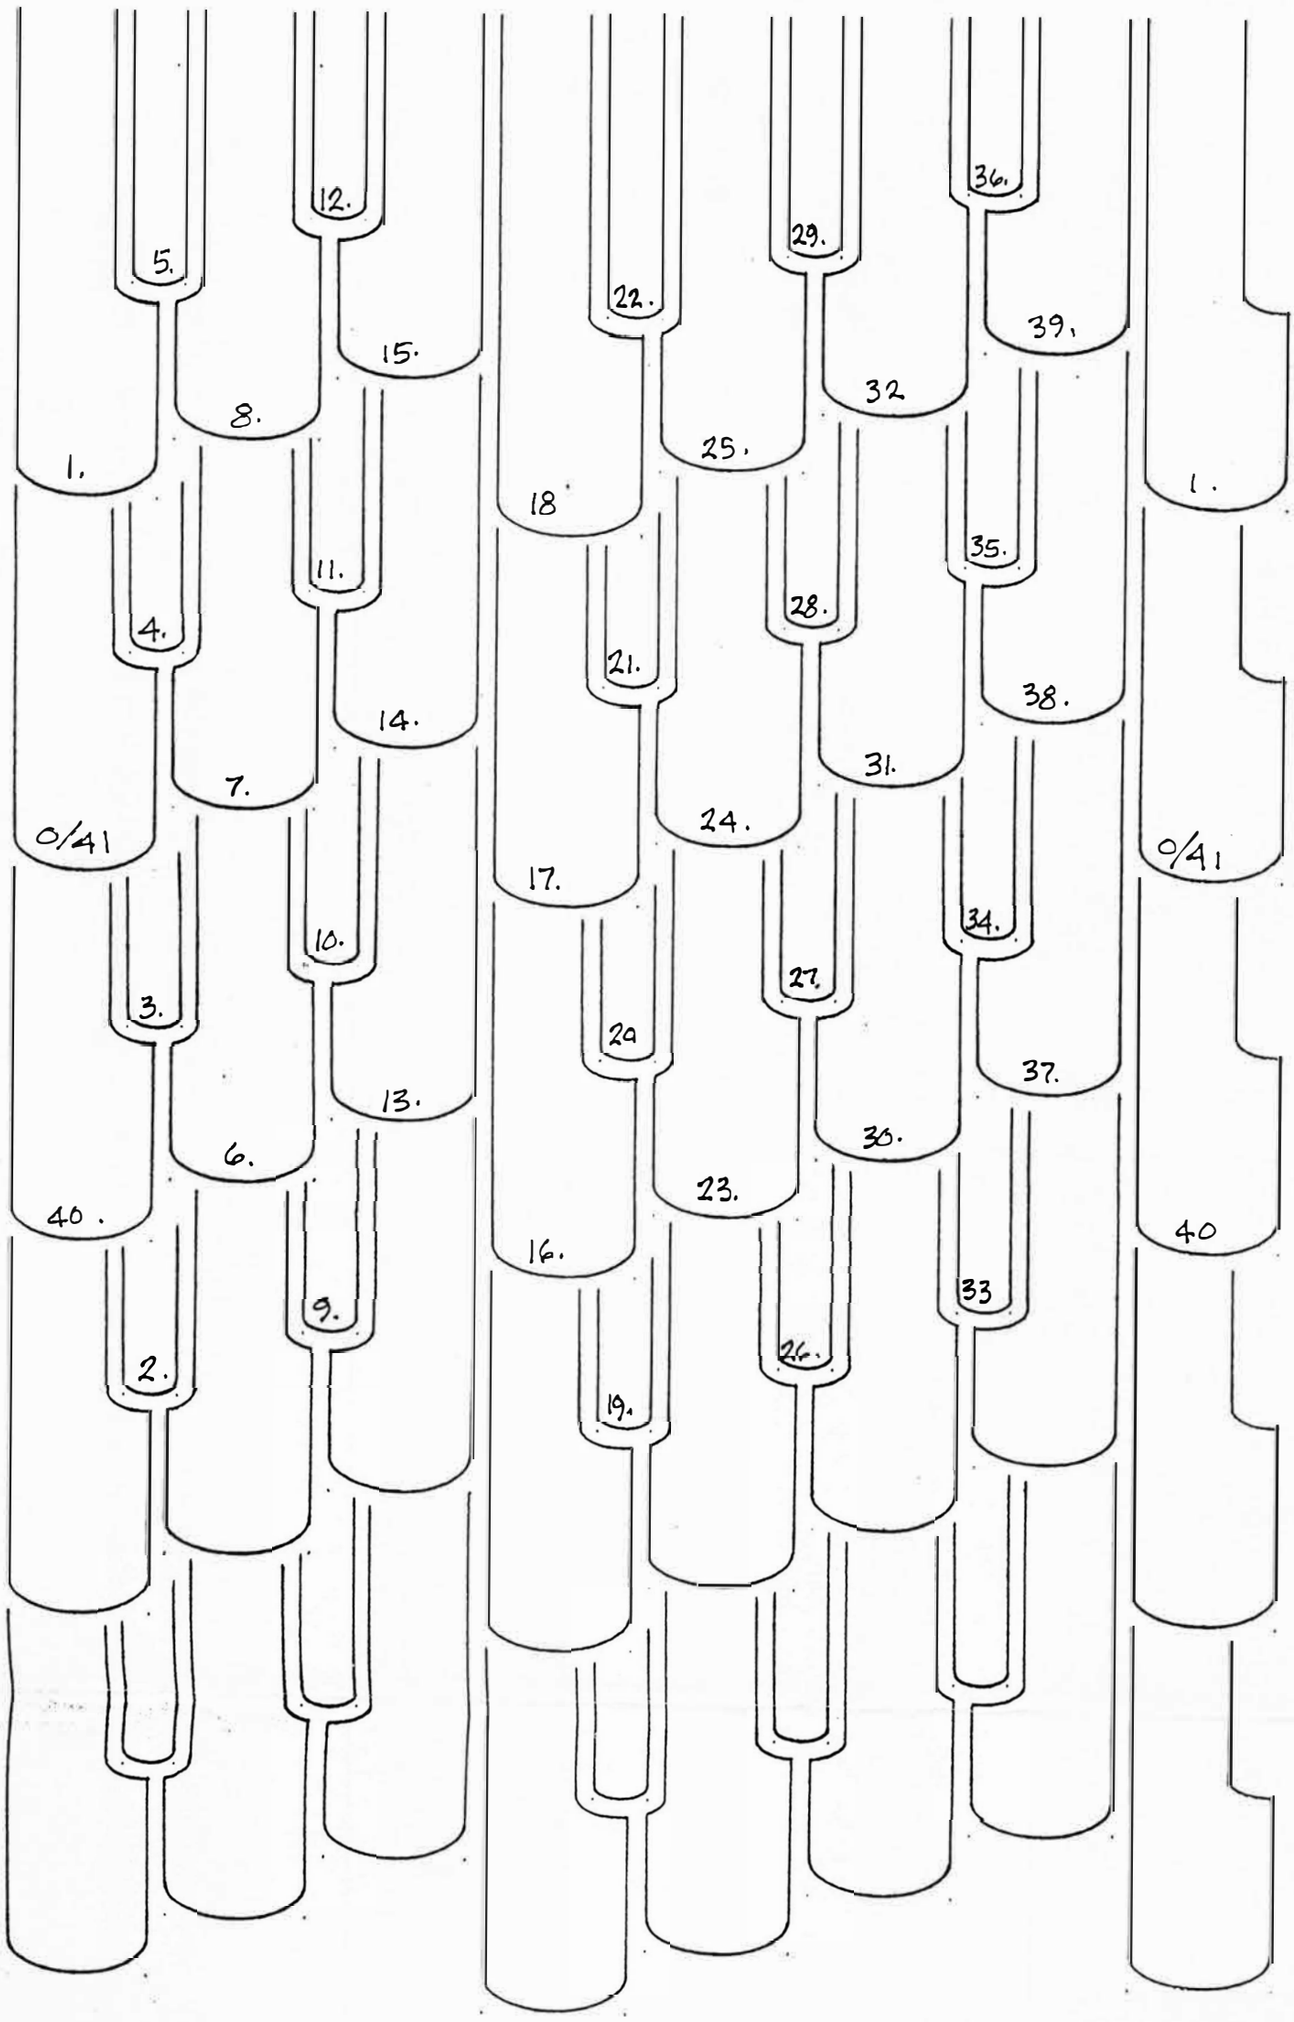






Faber Bosanquet

Notated for 41, Aug 10, 1998 by Eru Wilson



Circa 1974, E.W.

This figure is

This is Fig 1 from The Bosanquetian 7-rank Keyboard After Poole & Brown, from the pages of Xenharmonikon No. 1, 1974
This figure has been annotated to clarify the ~~the relati~~ association of the Peirce Series, (State 7, from 0/1 to 1/2) — with the the ~~straight-Line continuum~~ generator continuum ~~in~~ and the straight-Line pattern. On the left side is ~~a~~ the corresponding scale-tree (Peirce sequence) This ~~diagram~~ (historical) diagram is a thumb-nail sketch of the Linear ~~[illegible]~~ MOS continuum, ~~and is tacitly reflected~~ as ~~generated~~ expressed by the generator continuum.

27 33 30 15 2

This diagram is originally from XH no. 1, 1974, The Bosanquetian 7-rank Keyboard after Poole & Brown by Erv Wilson. It historically marks the time where Wilson spontaneously regenerates the Scale Tree (~~utterly~~ unaware of ~~Peirce~~ Charles Sanders Peirce) and associates it with the generator continuum and the straight-line-pattern. This diagram is annotated accordingly ~~to c~~ for clarification. E.W. 1997

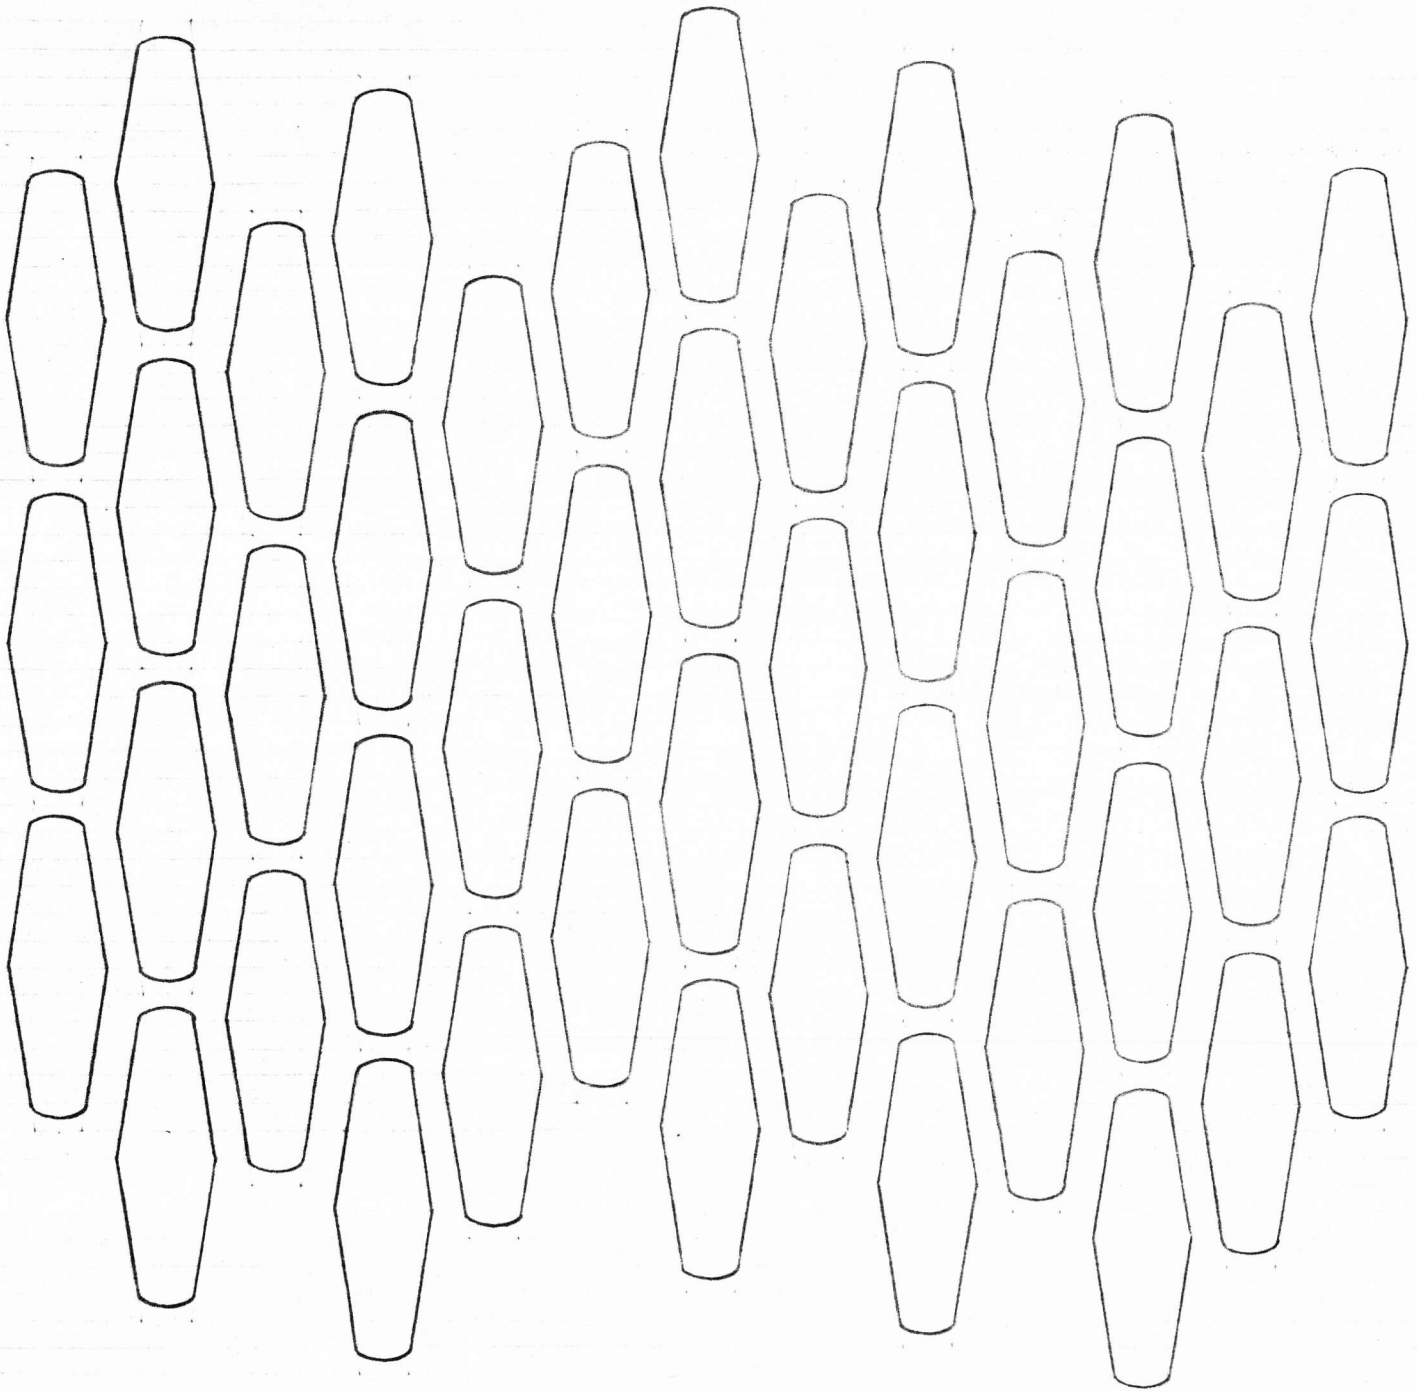

FIG. I

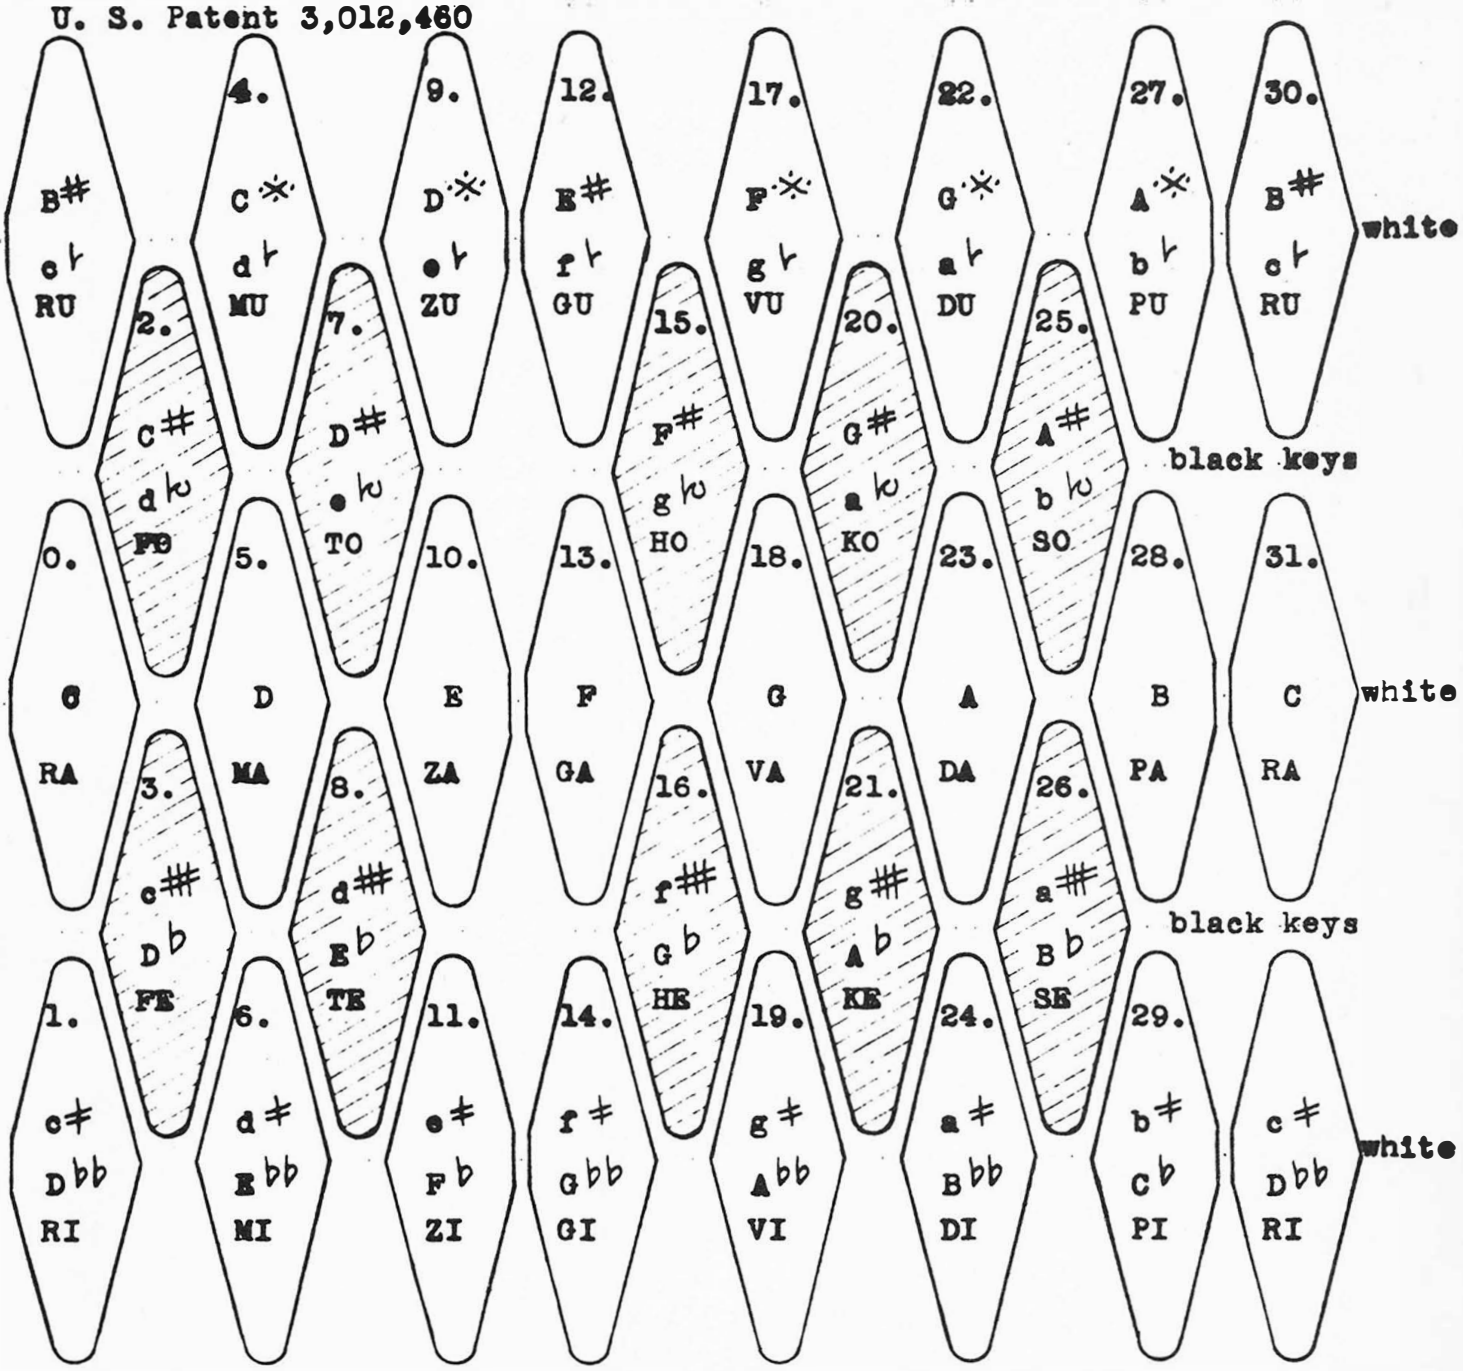
Digital ranks are successively elevated, receding from performer.
Pitches ascend according to numerals; from top to bottom, left to right.

U. S. Patent 3,012,460



Traditional notation in upper case. Exotic equivalents in lower case.
The $\frac{1}{3}$-flat, $\flat$, and the $1\frac{1}{2}$-flat, $\natural\flat$, are provided by Giuseppe Tartini.
The $\frac{1}{3}$-sharp, $\sharp$, and the $1\frac{1}{2}$-sharp, $\natural\sharp$, are provided by A. D. Fokker.

Equivalent notations for Pelog on degrees 0-3-7-14-17-20-25-31:

Copy: John Chalmers

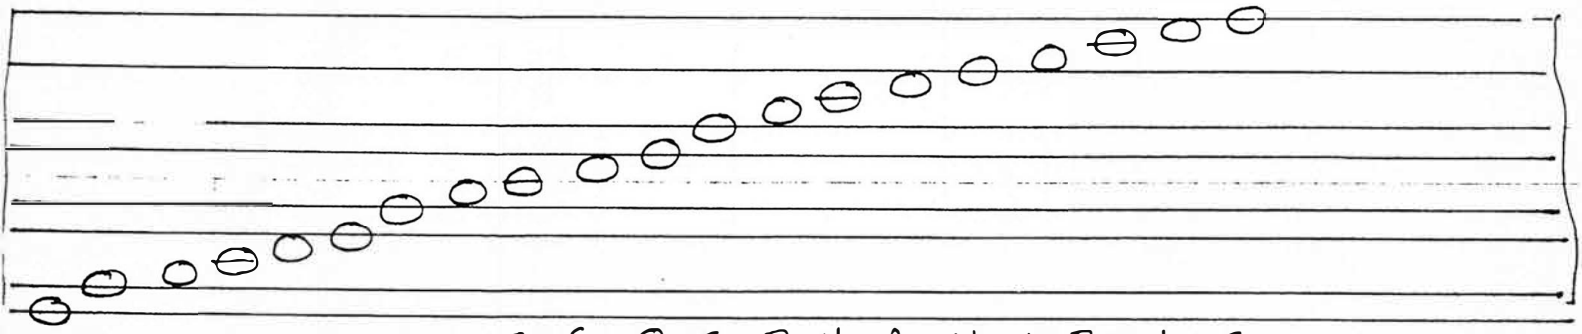
Dear Harry,

A couple of little items - first I took the liberty of sending your article in XH XII off to David Doty at 1/1 who states he has not seen, and asked me to send it.

ITEM 2. Some time ago I mentioned my tree notation for your 19, enclosed. I like this because it treats the bridge of minor thirds from the root to the Fifth as naturals, (as in a sense they should be) rather than as chain of curiously arranged sharps and flats. I.E.

F H N T S A C O Q U M E G I Ng L R B D
F Ab Cb Ebb F# A C Eb Gb A# C# E G Bb Db E# G# B D

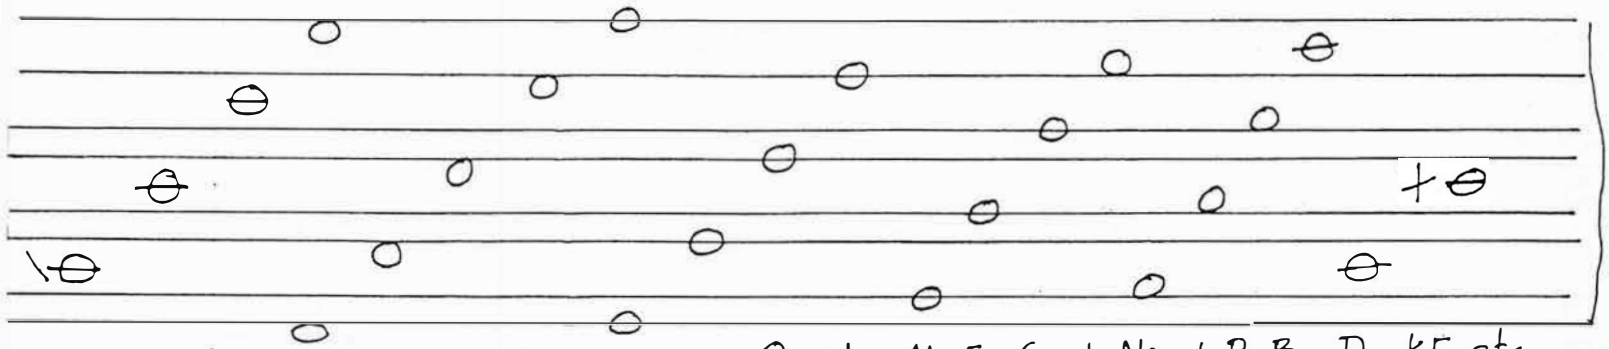
The minor thirds Ebb-F#, Gb-A#, ~~Db~~E# are spelled as doubly-augmented Seconds, enough to throw anybody. The script is taken with the organic 7-scale by a chain of minor thirds as the staff:



C M Ng D T O E L F S Q G R H A U I B N C
C C# Db D Ebb Eb E E# F F# Gb G G# Ab A A# Bb B Cb C

This allows using the supra-chromatic 19-tone scale as the basic artifact for composition and modulation without being bogged down (in this context) by archaic signatures. 2-interval patterns of 7, 11, 15, are easy to recognize and modulate, as well as the 19, 34 53 etc.

along the chain of minor thirds:



^D F H N T S A C O Q U M E G I Ng L R B D ^F etc
^D F Ab Cb Ebb F# A C Eb Gb A# C# E G Bb Db E# G# B D ^F etc

ITEM 3

I like this encl. variation of the Hanson Kbd. The octave reach is deliberately forfeited in order to git down into the micro-intervals of (here shown) 72 scale. ~~Or~~ With the right hand the "virtual pitch continuum" can be performed with speed and potential ~~velocity~~ virtuosity. The left hand will take a little more practising, and by a conscientious performer. This "virtual-pitch-continuum" is powerful stuff. One has to hear it. 53 has close to the same quality.

Two of my instruments are presently on display at the Hollywood Bowl museum for a year; the 19-tone clavichord built by Scott Hackleman, and the Hebdomekontany (= a 70-tone per 8ve, 2 octaves, percussive tubulong of 1" aluminum tubing) the sound of this thing is beyond belief. The tuning of this is attained by the 70 combinations of 4 out of 8 elements, where these elements are the harmonic entities 1, 3, 5, 7, 9, 11, 13, 15. The 4 elements of each combination ~~of 4~~ are multiplied (as 1x3x5x7 etc) to get 70 pitches. It is from this instrument that I learned how dramatically effective these small interval can be in sequence.

Yours,

Erv

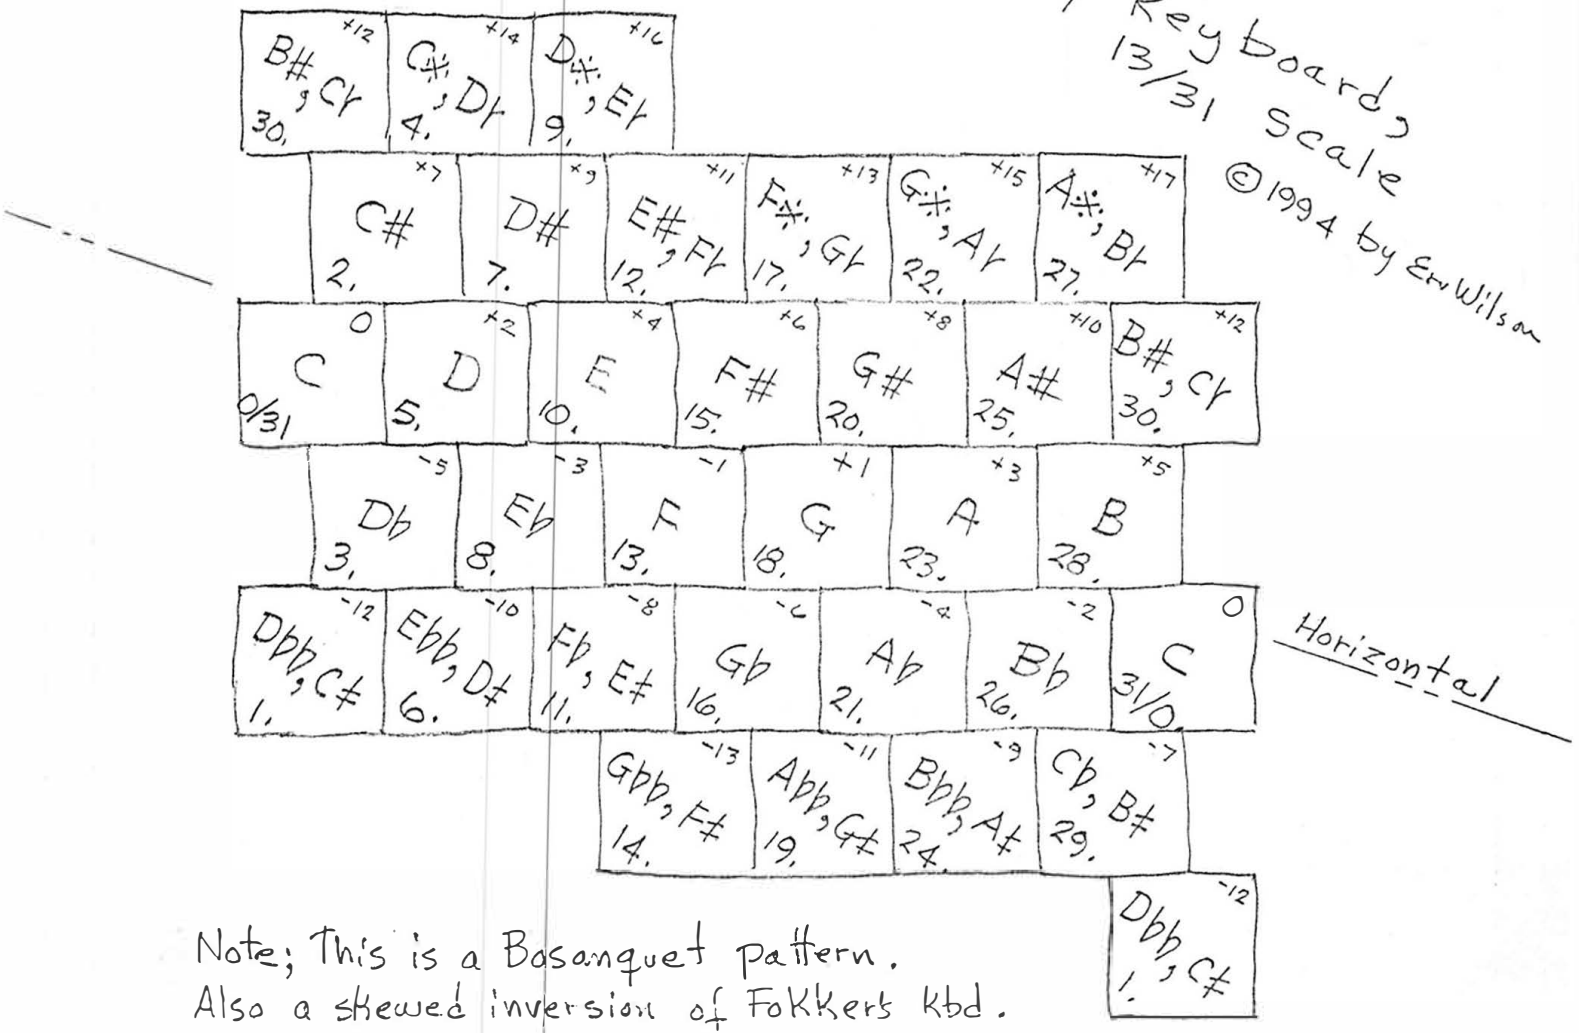
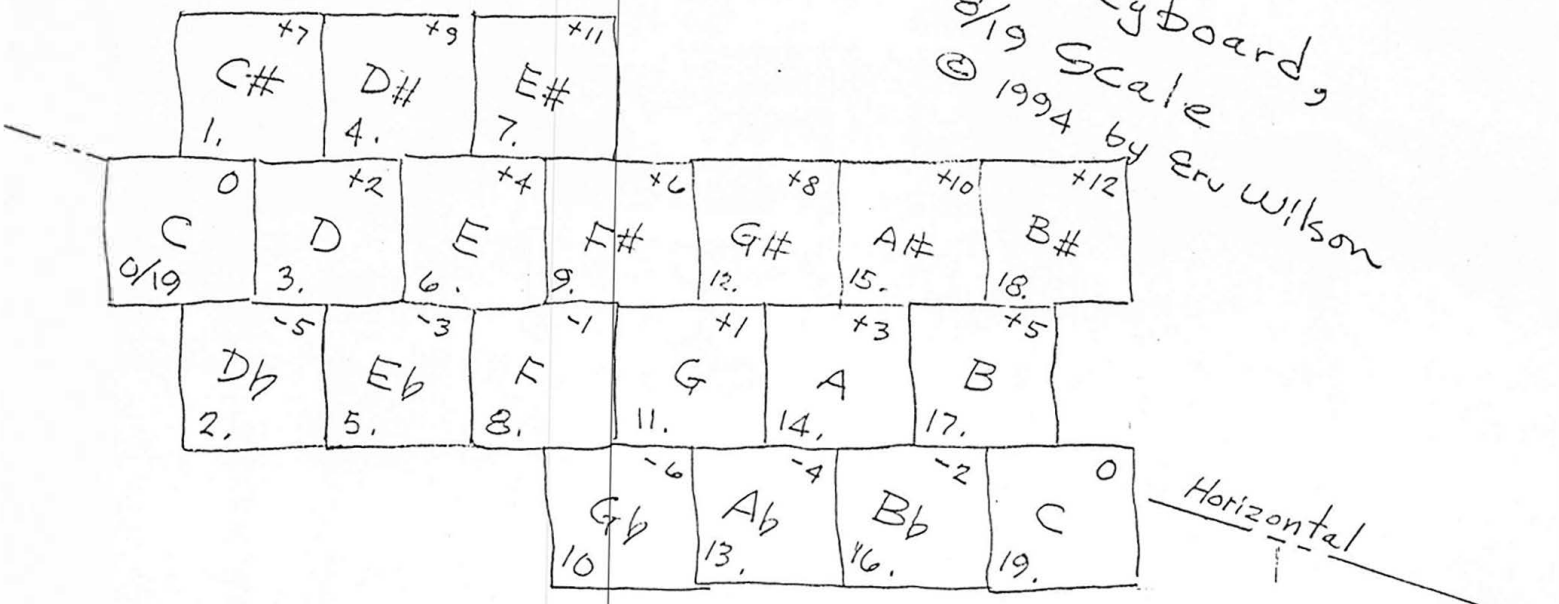
Note; This is a Bosanquet pattern



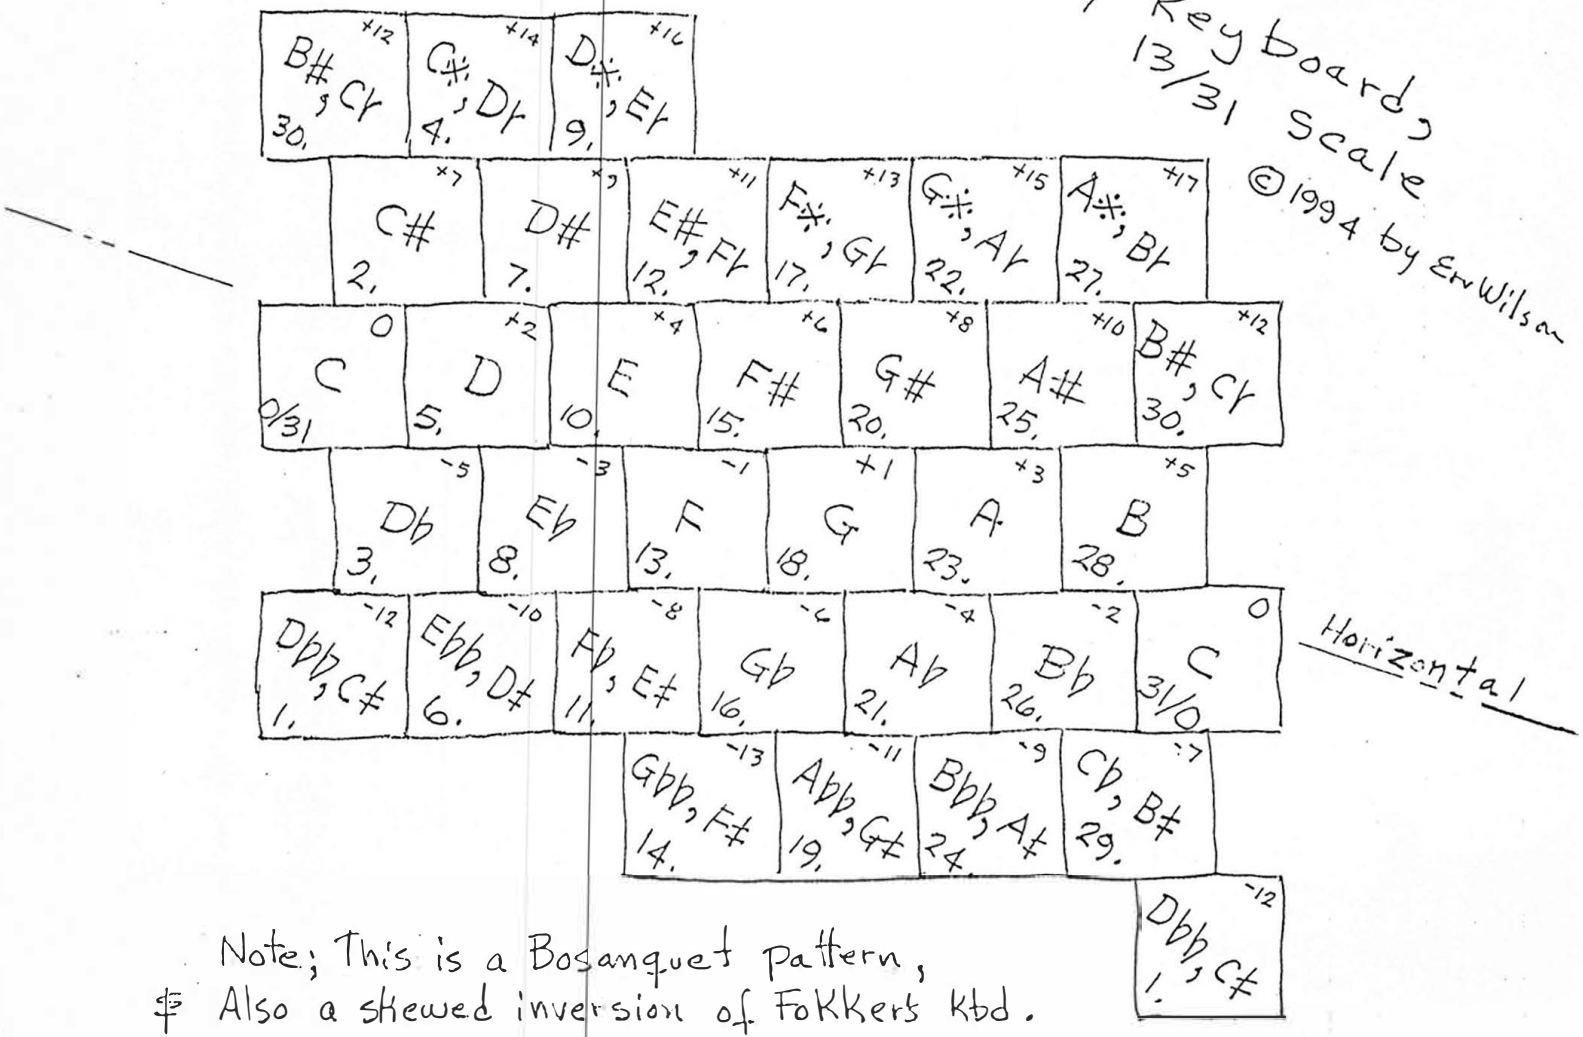
Note; This is a Bosanquet pattern.
Also a skewed inversion of Fokkers kbd.

3/7 Keyboard, 8/19 Scale

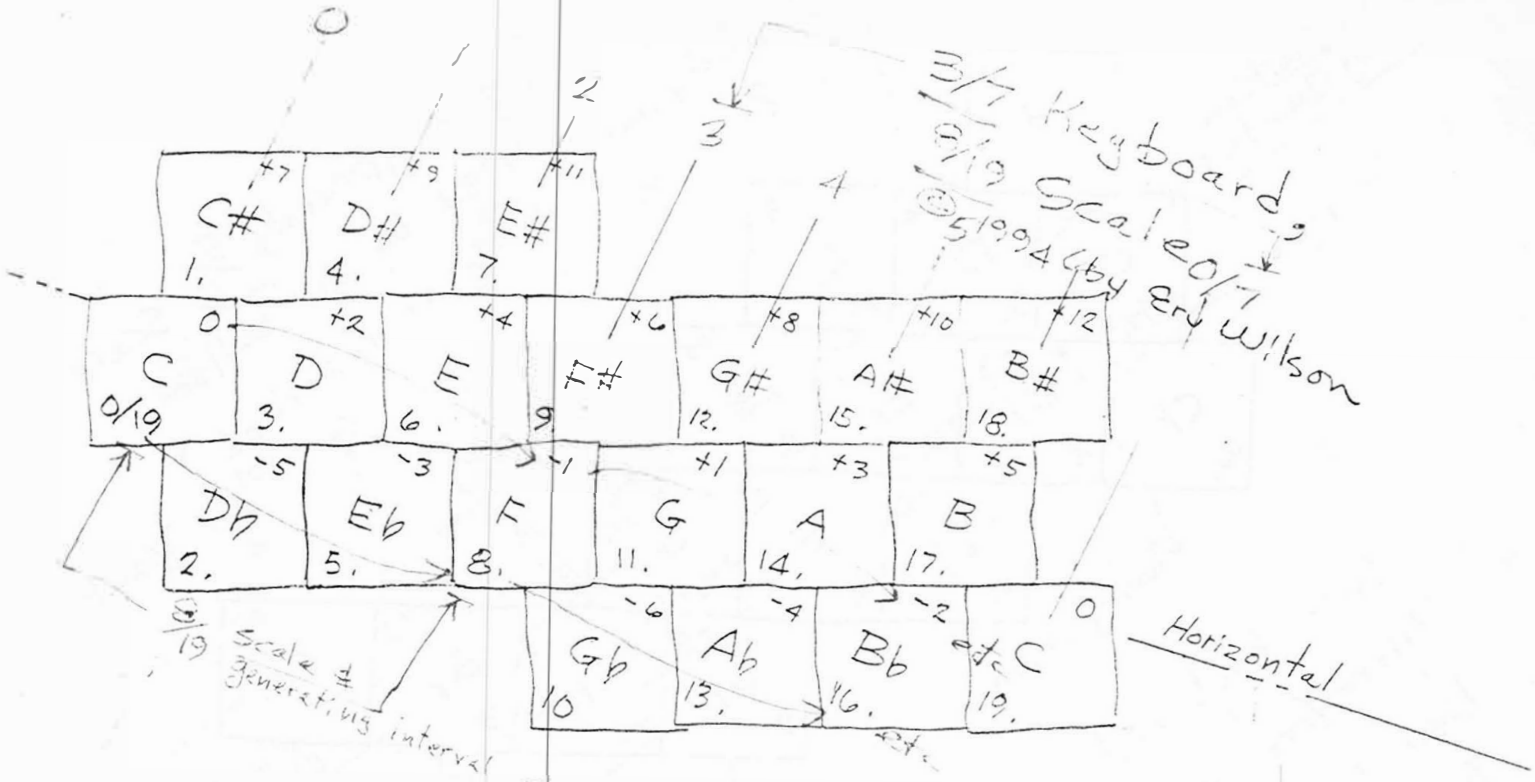


Note; This is a Bosanquet pattern

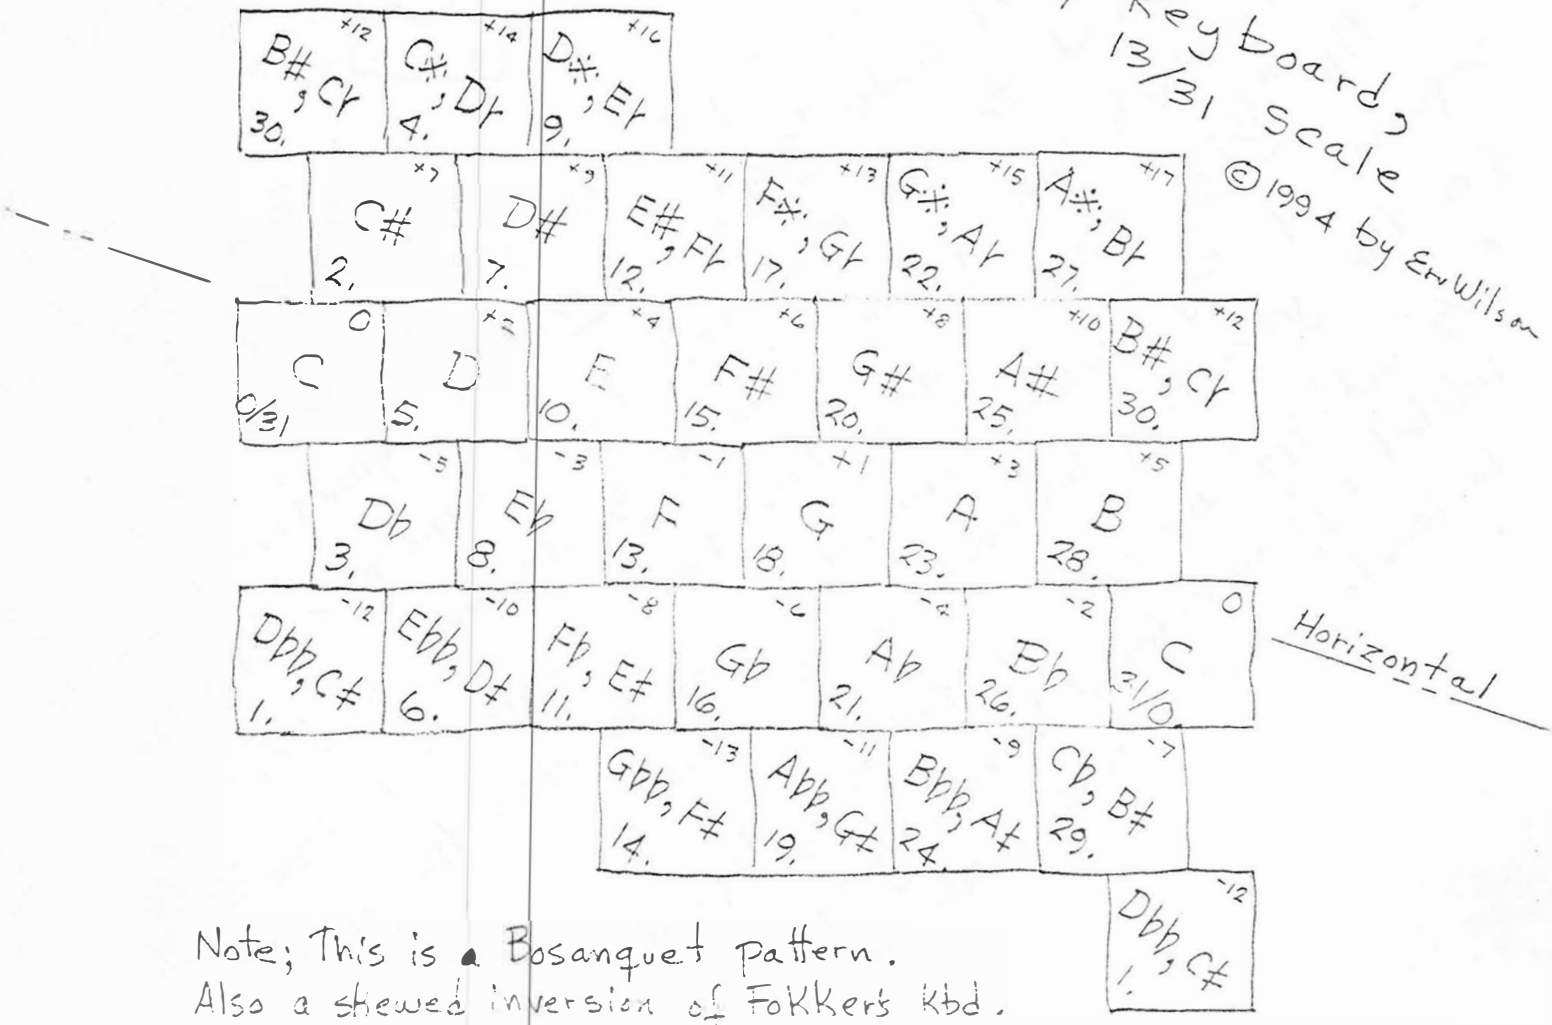
3/7 Keyboard, 13/31 Scale



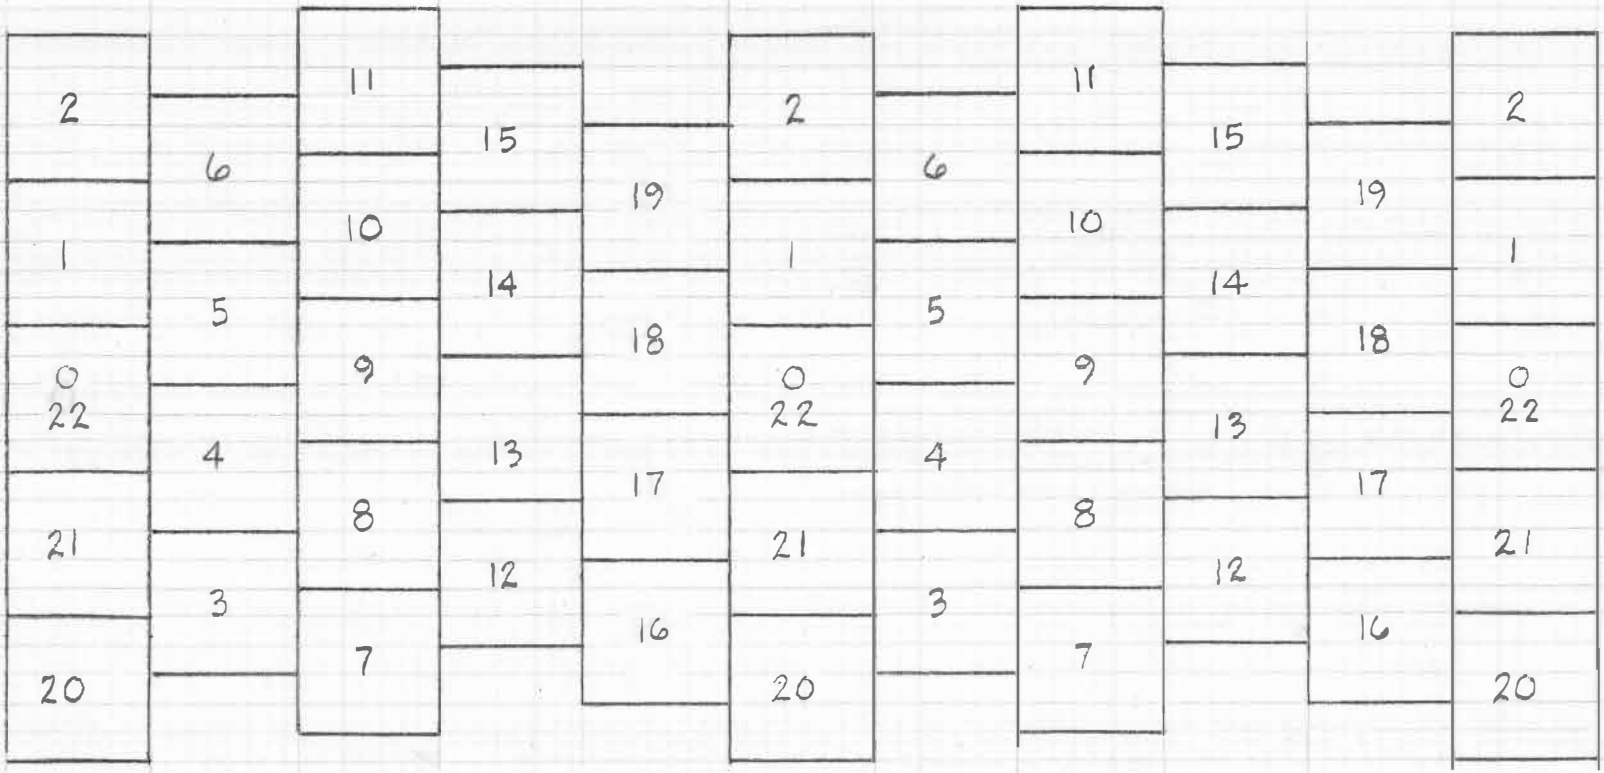
Note; This is a Bosanquet pattern,
Also a skewed inversion of Fokkers kbd.



Note; This is a Bosanquet pattern
When (+1) is greater than ½ octave I will usually use the (-1) position for the scale code, (for economy).



Note; This is a Bosanquet pattern.
Also a skewed inversion of Fokker's kbd.



Keyboard, Musical Instrument (B)
(Applied to 22-Tone Scale)
